

HTML Guide

GETTING STARTED

Getting Started with HTML documents

HTML documents are plain-text files that are created using a text editor; word processing software can be used if the document is saved as "text only with line breaks"

This Guide Assumes That You

1. Have a general understanding of how Web servers and browsers work
2. Have access to a Web server (unless the documents are produced for personal use on a local system)

Helpful Terms

WWW: World Wide Web

HTML: Hypertext Markup Language

ASCII: American Standard Code for Information Interchange

Hypertext (hyperlink, link): Text or image within HTML linking to another document

Text Editor: SimpleText on a Macintosh operating system, Notepad on Microsoft Windows

Image Map: One image with hyperlinked quadrants (hot spots)

Element: Fundamental component of the structure of a text document

Tags: Used to denote various elements in the HTML document

URL: Uniform Resource Locator; the address to any Internet site that is part of the WWW (such as www.quickstudy.com)

Attribute: Additional information included inside the start tag

PAGE OPTIONS

Page options are included as attributes of the <BODY> tag

Background Image

The BACKGROUND attribute allows an image to be used as a background for your document

Example: To include an image of stone for the background, enter

```
<BODY BACKGROUND="stone.gif">
```

Background, Text & Hyperlink Colors

By default, browsers display text in black and hyperlinks in blue with a gray or white background; HTML allows you to change these elements

BGCOLOR = Background

TEXT = Text displayed in the browser

LINK = Hyperlink, ALINK = Active Hyperlink, VLINK = Visited Hyperlink

Example: For a black background, silver text, and white hyperlinks

```
<BODY BGCOLOR="#000000"
TEXT="#9966CC" LINK="#FFFFFF">
```

Notes: The six-digit number and letter combinations represent the amount of RGB (red, green, blue) color as hexadecimal values from 00 to FF; 000000 is black (no color), FFFFFFFF is white (fully saturated); finding a specific color using these number and letter combinations can be cryptic

MINIMAL HTML DOCUMENT

Every HTML document should contain the basic HTML tags; the head contains the title and the body contains the text that is made up of paragraphs, lists, images and other elements; not every browser supports all tags; however, the browser ignores the tag if it is not supported

Note: HTML is not case-sensitive; <body> is equal to <BODY> or <Body>

Code Example

```
1 <HTML>
2 <HEAD>
3 <TITLE>A bare-bones HTML example</TITLE>
</HEAD>
4 <BODY>It is easy to learn HTML</BODY>
5 <P>This is the first paragraph. It is
short, but it is still a paragraph.</P>
6 <P>This is the second paragraph.</P>
</BODY>
</HTML>
```

Browser Output

Forms allow you to structure input from the user, such as customer response

Constructing a form is a two-part process

1. The form must be created within your HTML document
2. A program (usually C, Unix or Perl) must be created; this program is called CGI (Common Gateway Interface); CGI receives the data from your form and implements the action specified within the program

The syntax for creating forms consists of 3 distinct elements between the <FORM> tags

1. INPUT elements are the basis for various button types and text inputs
 - Text: Single-line text window
 - Radio: A group of buttons in which only one may be chosen
 - Checkbox: A box that can be checked or unchecked
 - Reset: A button set to clear form values
 - Submit: A button to send the form data to the CGI on the server
2. SELECT elements create a pull-down menu
 - OPTION elements define the menu choices
 - The SELECTED attribute in the OPTION element specifies the default menu item to be displayed
3. TEXTAREA elements specify a multi-line text field
 - The COLUMNS and ROWS attributes between the <TEXTAREA> tags specify the default value of the field
