

In addition to the chain brake the chain catcher and right-hand guard on the rear handle are also considered part of the chain saw's safety equipment. It is obviously important that the chain brake functions as intended, but it is also important that the chain catcher is undamaged and in position. In the event of a chain break this will catch up the chain so that the hand will not be injured.

WARNING!

Protective goggles must be worn during all work on the chain brake to prevent personal injury if for some reason the brake spring should fly off.

Dismantling

Remove the chain brake from the chain saw.

Disassembly

Release the chain brake.

Press out the one half of the hand guard's bearing.

Press out the other half of the hand guard's bearing.

Dismantling

Remove the guide bar's attachment nuts and lift off the clutch cover with the chain brake.

Clean from sawdust and dirt.

WARNING!

The brake spring is tensioned with a very large force and can cause personal injury if the brake is not released prior to further work.

Disassembly

Release the chain brake.

Unscrew the screw in the hand guard's bearing completely, and then screw in approx. 2 turns.

Drive out the bearing by tapping the screw with a hammer.

Press out the other half of the bearing by means of suitable mandrel, e.g. SOS 38 17-05.
Lift off the hand guard.
