Introduction

It is obvious that technological proliferation has occurred in every sphere of the world. The nature and proliferation of digital devices and their accompanying applications vary with geography and culture across the globe. The continues growth in ownership and usage of digital technologies in the last few decades have had a significant impact on education, particularly at the Higher levels. Smartphones have become an integral part of the daily life of many university students, even in developing countries (Hossain & Ahmed, 2016). Studies have identified that students are increasingly using a diverse range of academic apps to support their learning needs (Woodcock et al., 2012).

Globally, the use of these smart technologies improves access to higher education, facilitates communication between instructors and learners, allows for the discovery and dissemination of learning materials and removes some bottlenecks associated the mortar and bricks system. The enormous benefits of these digital devices have made it imperative for their integration into teaching and learning at higher levels of education. It is in the light of this, the article *Higher Education Students' Ownership and Usage of Smart Phones and Tablets: The Case of Kwame Nkrumah University of Science and Technology (KNUST)* attempts to investigate students' ownership and usage of the smartphones and tablets, and how they are influencing their learning experiences in the university. A sample of 183 students was used for the study. The study aimed to identify the kind of digital mobile devices (smartphones and tablets) KNUST students have and what they use them for.

Methodology

To ensure systematic collection and presentation of data, the Author(s) of the article conducted a baseline study. A quantitative online survey was used for the study.

Sampling Theory David Hankin, Michael S. Mohr, Kenneth B. Newman, 2019-09-26 Sampling theory considers how methods for selection of a subset of units from a finite population affect the accuracy of estimates of descriptive population parameters mean total proportion Although a sound knowledge of sampling theory principles would seem essential for ecologists and natural resource scientists the subject tends to be somewhat overlooked in contrast to other core statistical topics such as regression analysis experimental design and multivariate statistics This introductory text aims to redress this imbalance by specifically targeting ecologists and resource scientists and illustrating how sampling theory can be applied in a wide variety of resource contexts The emphasis throughout is on design based sampling from finite populations but some attention is given to model based prediction and sampling from infinite populations **Ideas and**

Management Control Systems and Cross-Cultural Research Michael Hanzlick, 2015-01-31 A fundamental challenge that management faces in the twenty first century is how to exercise adequate control i.e. how to guide and direct the behaviour of their subordinates With increasing globalisation firms witness a cross cultural impact too Of particular interest is the question of whether to use the standardized form of control similar to the home base of firms or whether to adapt their control practices to the local specificities Given the meagre state of the literature in management control with a cross cultural emphasis this study addresses a real world problem namely the question whether management control practices are configured similarly or differently across cultures Relying on a generalized industry sample across four countries Belgium Canada Germany and Poland this study sought to shed light on one of the more intriguing questions does culture matter for specific control areas in particular for performance measurement performance evaluation and reward systems The theoretical foundations are grounded in the cultural framework of the GLOBE project accompanied by thoughts of new institutionalism stakeholder theory and contingency thoughts Hypotheses are tested by mean comparisons ANOVA ANCOVA The empirical findings highlight cultural differences for a broader set of control practices and deliver new insights into the intersection of culture and management control This dissertation crafts a novel topic with high relevance for both researchers and practitioners The study demonstrates areas for which management control practices should be adapted to the local needs and areas for which those practices could be harmonized in the whole company This monograph stresses some areas in which future empirical cross cultural research can benefit and some areas where conceptual thoughts could be advanced
