Handbook of Research on Building Information Modeling and Construction Informatics: Concepts and Technologies

Underwood, Jason, Isikdag, Umit, 2009-12-31 In recent years building information modeling has become a very active research area of construction informatics with investigation of ICT use within construction industry processes and organizations The Handbook of Research on Building Information Modeling and Construction Informatics Concepts and Technologies addresses the problems related to information integration and interoperability throughout the lifecycle of a building from feasibility and conceptual design through to demolition and recycling stages Containing research from leading international experts this Handbook of Research provides comprehensive coverage and definitions of the most important issues concepts trends and technologies within the field *Building Information Modeling* Nawari O. Nawari, 2018-02-12 Many researchers and software developers have put a lot of effort into finding solutions for automated code checking This book is a good summary of these efforts and provides readers with a comprehensive understanding of the status of such technologies in the industry It also guides readers on implementation of such techniques using the platforms and tools currently available in the industry Issa Ramaji University of North Florida USA Building Information Modeling Automated Code Checking and Compliance Processes covers current and emerging trends in automating the processes of examining building design against codes and standards of practice The role of Building Information Modeling BIM technologies in these processes is thoroughly analyzed and explains how this new technology is significantly transforming modern architecture engineering and construction AEC domains The book also introduces the theoretical background of computerizing compliance verification including domain knowledge representations building model representations and automated code checking systems An underlying goal for the material covered is to present the use of BIM technology as an integral part of the automated auditing process that can lead to a more comprehensive intelligent and integrated building design a design where an optimized solution can be achieved in harmony with the current codes and standards of practice This new proposed BIM based framework for automating code conformance checking is one of the most powerful methods presently available to reflect actual building code requirements and the methods described in the book offer significant benefits to the AEC industry such as Providing consistency in interpretation of regulatory provisions Reducing code compliance validation errors and the cost and time associated with compliance checking Allows for the ability to self check required aspects before bidding Reduces the amount of time and resources required during design review Allows for optimal design along with faster turnaround on feedback and potentially faster approvals for construction permits by building and infrastructure authorities

Monitoring and Protection of Critical Infrastructure by Unmanned Systems P. Daponte, F. Paladi, 2023-02-17

The attention of many developed countries has increasingly focused on the security and protection of critical infrastructure. The use of Unmanned Systems (US) for this purpose has been growing rapidly in recent years as advances in technology, increased versatility and smaller size together with the reduced risks and costs associated with removing the need for a pilot or operator on board have all made these systems more attractive. This book, *Monitoring and Protection of Critical Infrastructure by Unmanned Systems*, presents 15 papers delivered at the NATO Advanced Training Course (ATC) of the same name, hosted in Chisinau, the Republic of Moldova, from 30 May to 5 June 2022. This event was held in a hybrid format and was attended in person by 12 of the 31 speakers and the majority of the 92 attendees. The aim of the ATC was to explore the monitoring and protection of critical infrastructure using US. Various US, including ground control stations (GCS), data communication links and a range of unmanned aerial (UAV), ground (UGV) and underwater (UUV) vehicles are covered, and the papers included here also deal with topics such as the use of drones for buildings inspection and the new technologies which can help with the recognition and monitoring of anthropogenic threats and natural hazards. There is also a focus on data analysis and modeling. Providing an overview of the use of unmanned vehicle systems and sensor network technology for monitoring and protection, the book will be of interest to all those working to protect critical infrastructure.
