The analysis of team and racket sports whether in competition for opponent preparation, match plan follow up or training is nowadays indispensable in many sports games at different levels. This analysis nevertheless presents many open questions and problem areas. Which data should be used? Who manages the data? Who provides whom with which information? How is this information presented, digested and applied? The more complex and anonymous the data management is, the more commercial, expensive and uncontrollable information management and provision becomes. **Match Analysis: How to Use Data in Professional Sport** is the first book to examine this topic through three types of data sets: video, event and position data, and show how to interpret this data and apply the findings for better team and individual sport performance. This innovative new volume is key reading for researchers, students and practitioners alike in the fields of Coaching, Performance Analysis, Sport Management and related specific sport disciplines. **Space Law** Francis Lyall, Paul B. Larsen, 2016-04-01 The opening of space to exploration and use has had profound effects on society. Remote sensing by satellite has improved meteorology, land use and the monitoring of the environment. Satellite television immediately informs us visually of events in formerly remote locations as well as providing many entertainment channels. World telecommunication facilities have been revolutionised. Global positioning has improved transport. This book examines the varied elements of public law that lie behind and regulate the use of space. It also makes suggestions for the development and improvement of the law, particularly as private enterprise plays an increasing role in space. **Computer Algebra in Scientific Computing** François Boulrier, Matthew England, Timur M. Sadykov, Evgenii V. Vorozhtsov, 2021-08-16 This book constitutes the proceedings of the 23rd International Workshop on Computer Algebra in Scientific Computing (CASC 2021) held in Sochi, Russia, in September 2021. The 24 full papers presented together with 1 invited talk were carefully reviewed and selected from 40 submissions. The papers cover theoretical computer algebra and its applications in scientific computing. **Shuttle Safety** United States. Congress. Senate. Committee on Commerce, Science, and Transportation. Subcommittee on Science, Technology, and Space, 2004. **Teaching Mathematics Using Popular Culture** Elana Reiser, 2015-11-09 Mathematics teachers often struggle to motivate their students. One way to cultivate and maintain student interest is for teachers to incorporate popular media into their methodology. Organized on the subject strands of the Common Core, this book explores math concepts featured in contemporary films and television shows and offers numerous examples high school math teachers can use to design lessons using pop culture references. Outlines for lessons are provided along with background stories and historical references. **Commerce, Justice, Science, and Related Agencies Appropriations for 2013** United States. Congress. House. Committee on Appropriations. Subcommittee on Commerce, Justice, Science, and Related Agencies, 2012. **Gender and the Race for Space** Erinn McComb, 2025-06-10 The American astronaut image was informed

by early Cold War ideals of masculinity that helped mold a distinctly American anti communist masculinity which appeared on the surface anyway to resolve not only an American crisis of masculinity but helped win the Cold War on an ideological and popular level This American image focused on strict gender binaries of man as the protector controlling technology and containing communism while woman was the passive actor with spaceflight technology left behind in the home waiting for the return of the astronaut husband Allowing women to fly into space would have represented a lack of individual control with spaceflight technology

Commercial and Military Uses of Outer Space Melissa de Zwart, Stacey Henderson, 2021-02-25 This edited book brings together a diverse range of chapters on space related topics The authors included in this book are drawn from Australia and overseas from academia government industry civil society and the military This book contains chapters that cover topics such as law science archaeology defence policy and more all with a focus on space This edited collection is a timely international and interdisciplinary book which addresses some of the contemporary issues facing activities in space and those attempting to understand use and regulate the space domain This edited book seeks to normalise the role of women as experts in the space sector by not calling attention to the fact that all the authors are women they are all experts in their respective fields who just happen to be women Bringing together these contributions in this book in turn promotes the inclusion of diversity in the space sector This edited collection is an opportunity to influence the development of the space industry in terms of gender diversity and diversity of disciplines and thinking while it is in its formative stage rather than trying to redress imbalances once they are entrenched in the industry

Vesta and Ceres Simone Marchi, Carol A. Raymond, Christopher T. Russell, 2022-03-31 The NASA Dawn mission launched in 2007 aimed to visit two of the most massive protoplanets of the main asteroid belt Vesta and Ceres The aim was to further our understanding of the earliest days of the Solar System and compare the two bodies to better understand their formation and evolution This book summarises state of the art results from the mission and discusses the implications for our understanding not only of the asteroid belt but the entire Solar System It comprises of three parts Part 1 provides an overview of the main belt asteroids and provides an introduction to the Dawn mission Part 2 presents key findings from the mission and Part 3 discusses how these findings provide insights into the formation and evolution of the Solar System This is a definitive reference for academic researchers and professionals of planetary science asteroid science and space exploration

Metadata Standards and Web Services in Libraries, Archives, and Museums Erik Mitchell, 2015-10-21 Metadata in library information environments is evolving rapidly This book provides readers with a set of tools for designing developing and implementing metadata rich information systems while also examining the challenges and opportunities in this field As the world of library and information science has developed in the age of digital information metadata and metadata rich information systems have become increasingly important and more complex and confusing This book will enable students instructors and practitioners in the information science field to understand how these new systems and standards will impact

their careers and professions Author Erik Mitchell explores definitions of information and presents an up to date consideration of user needs in information systems to provide necessary background before moving on to in depth discussions of metadata information organization practice and information system design Each chapter incorporates hands on activities to complement the reading material allowing readers to build technical skills alongside the important conceptual learning in this content area Readers will gain conceptual understanding and skills that will allow them to analyze and transform structured data develop metadata rich information systems and design systems with user needs and digital literacies in mind This book is intended for library and information science students taking information organization metadata or other core digital cataloging classes but will also be highly useful for professionals seeking to learn the details of metadata systems and theory using a hands on approach **Principles of Modern Radar Missile Seekers** Evgeny

Environmental Law Across Cultures Kirk W. Junker, 2019-12-09 This book provides a practical functional comparison among various institutions tools implementation practices and norms in environmental law across legal cultures This is a new approach that focuses on the act of comparison looking at legal practice from the ground up including the perspective of citizens Most literature on comparative environmental law either focuses on a two way comparison of state jurisdictions or simply juxtaposes environmental features of two or more state jurisdictions without engaging in any analysis of the comparison However this book treats legal cultures as the objects of comparison as it provides practical comparisons among

various institutions tools and norms in environmental law The arrangement and organisation of the material reverses the more traditional presentation of comparative environmental law as a series of countries within which separate descriptions are respectively presented In this book the reader is presented with environmental legal themes with examples and case studies drawn from various cultures that are compared in order to help understand the theme Case studies draw on the authors experiences in a range of legal cultures including in Australia Brazil China Chile Ethiopia Germany India Nigeria Slovakia and the USA The comparative nature of the book allows domestic professionals to develop skills to enable them to understand and advocate broader contexts for clients and helps students become more aware of specific legal systems while questioning why their own system functions or does not function as it does The book is aimed at advanced undergraduate and postgraduate students of environmental law as well as researchers and practitioners
