Effective Front-End Strategies to Reduce Waste on Construction Projects Peter G. Rundle, Alireza Bahadori, Ken Doust, 2019-05-30 This volume outlines a progressively staged process focused on fostering a more effective more efficient and greener global construction industry The research based book commences with an evaluation of eight methodologies identified after a worldwide literature and compliance review It is followed by a more detailed report on four of these options with the ultimate objective of independent selection within the construction engineering community of a single most appropriate methodology as the approach for further more detailed investigation The eight methodologies were selected against six key performance indicators developed as assessment criteria and include knowledge management lean construction construction contract procurement practices optimal work duration on site construction site waste rationalization of construction safety regulations sustainable construction labor force and portfolio project development A primary outcome of the selected methodology being a triple bottom line benefit to key stakeholders commercially and also to the ecology along with the community at large Front end construction waste strategies to serve as best practices to minimize waste generated by construction projects was the methodology selected for detailed research The text also covers the primary sources of construction waste The book is ideal for civil and construction engineers as well as project developers managers and public sector waste management specialists

Crash to Paywall Brian Gorman, 2015-10-01 In 2014 when Postmedia acquired Quebecor's Sun Media newspaper and online assets there was a sense that the recent history of newspapers was repeating itself not as comedy or tragedy but as eulogy Crash to Paywall shows that while the newspaper business was weakened by decreases in advertising revenues and circulation much of its problems stem from self inflicted damage and business practices dating back to the 1970s Brian Gorman explores the Canadian newspaper industry crisis and the relationship between the news media and the public He challenges both the popular mantra that a perfect storm of unforeseen circumstances blindsided a declining industry and the narrative that readers were abandoning newspapers causing advertisers to turn away from dying media Gorman argues that observers had been warning for decades that the business was creating its own problems by acquiring ever larger debt and shareholder obligations while steadily cutting back on journalists resources Finally by providing journalism for free online newspaper companies devalued their most important resource and impaired their profitable print products With dozens of interviews conducted with leading Canadian journalists and editors Crash to Paywall brings to light the many misconceptions generalizations omissions and highly suspect conclusions about the present state of newspapers and their future

Retallack,2019-09-10 A student friendly textbook that describes ancient soils how they may be identified and their use in paleoenvironmental reconstruction Ancient soils contain vital

mineralogical geochemical textural and paleontological information about the continental environments in which they formed. Advances in isotope geochemistry and sequence stratigraphic models allow evermore detailed reconstructions of environmental change from paleosols and new insights into such diverse topics as atmospheric chemistry, global change, paleoecology, geobiology, and mass extinction. This book educates readers about the field of paleopedology and how it remains a key area of investigation for geologists and environmental scientists seeking to learn about and reconstruct the condition and evolution of paleoenvironments. Presented in three sections: Soils and Palesols, Factors in Soil Formation, and Fossil Record of Soils, *Soils of the Past: An Introduction to Paleopedology* describes the main types of ancient soil procedures for identifying and studying them, their classification, and most significantly, a wide array of examples of how paleosols have been used for paleoenvironmental reconstruction. The book is an excellent reflection of the current state of knowledge and can be widely adopted over many disciplines. All chapters have been revised and updated to reflect advances in soil science in the last two decades. New tables display a wealth of new data added since the 2nd edition published in 2001. New figures have been added, and line art has been redrawn to improve clarity and promote understanding. References have been updated throughout. *Soils of the Past*, 3rd Edition, is written for advanced undergraduates studying paleopedology as part of a degree in geology, environmental science, or physical geography, and for interested professional earth scientists.

Trade

and Culture Patricia M. Goff, 2020-12-28 Governments that seek to liberalize trade can find that doing so is often in tension with their desire to achieve the objectives of cultural policy This is because measures like local content requirements can seem like discriminatory practices when viewed through the lens of trade liberalization This tension has prompted a long standing debate with great variation in how countries have approached it Trade and Culture The Ongoing Debate explores this variation across geographic space It also seeks to explain the evolution in these various policies over time Policies are not static largely due to domestic politics shifts in the international trading system and technological developments The chapters in this volume explore the different approaches to the trade and culture debate and provide an up to date look at current versions of these policies in Canada the European Union South Africa Latin America South Korea the United States and China This book will be of great value to scholars and researchers interested in cultural policies and the politics of international trade This book was originally published as a special issue of the International Journal of Cultural Policy

Mitochondria: Hubs of Cellular Signaling, Energetics

and Redox Balance Miguel A. Aon, Amadou K. S. Camara, 2017-08-11 Poised at the convergence of most catabolic and anabolic pathways mitochondria are the center of heterotrophic aerobic life representing a hub in the overall metabolic network of cells. The energetic functions performed by mitochondria face the unavoidable redox hurdle of handling huge amounts of oxygen while keeping its own as well as the cellular redox environment under control. Reactive oxygen species (ROS) are produced in the respiratory chain as a result of the energy supplying function of mitochondria. Originally considered an unavoidable by-product of oxidative phosphorylation, ROS have become crucial signaling molecules when their levels are kept within physiological range. This occurs when their production and scavenging are balanced within mitochondria and cells. Mitochondria-generated hydrogen peroxide can act as a signaling molecule within mitochondria or in the cytoplasm, affecting multiple networks that control, for example, cell cycle, stress response, cell migration and adhesion, energy metabolism, redox balance, cell contraction, and ion channels. However, under pathophysiological conditions, excessive ROS levels can happen due to either overproduction or overwhelming of antioxidant defenses or both. Under oxidative stress, detrimental effects of ROS include oxidation of protein, lipids, and nucleic acids, mitochondrial depolarization, and calcium overload and cell-wide oscillations mediated by ROS-induced ROS release mechanisms. Mitochondrial dysfunction is central in the pathogenesis of numerous human maladies, including cardiomyopathies and neurodegeneration. Diseases characterized by altered nutrient metabolism, such as diabetes and cancer, exhibit elevated ROS levels. These may contribute to pathogenesis by increasing DNA mutation, affecting regulatory signaling and transcription, and promoting inflammation. Under metabolic stress, several ionic channels present in the inner and outer mitochondrial membranes can have pro-life and death effects. In the present E-book based on the Frontiers Research Topic entitled "Mitochondria: Hubs of cellular signaling, energetics, and redox balance," we address one of the fundamental questions that the field of ROS biology faces today: how do mitochondria accomplish a reliable energy provision and at the same time keep ROS levels within physiological, non-harming limits but crucial for cellular signaling function? Additionally, and within the perspective of mitochondria as signaling energetic hubs in the extensive cellular metabolic network, we ask: how can their collective dynamics scale from the subcellular to the cellular, tissue, and organ levels to affect function in health and disease?
