Hull, Sirimon Treepongkaruna, David Colwell, Richard Heaney, David Pitt, 2013-09-12 This first Australasian edition of Hull's bestselling *Fundamentals of Futures and Options Markets* was adapted for the Australian market by a local team of respected academics. Important local content distinguishes the Australasian edition from the US edition, including the unique financial instruments commonly traded on the Australian securities and derivatives markets and their surrounding conventions. In addition, the inclusion of Australasian and international business examples makes this text the most relevant and useful resource available to Finance students today. Hull presents an accessible and student-friendly overview of the topic without the use of calculus and is ideal for those with a limited background in mathematics. Packed with numerical examples and accounts of real-life situations, this text effectively guides students through the material while helping them prepare for the working world. For undergraduate and postgraduate courses in derivatives, options and futures, financial engineering, financial mathematics and risk management.

**Marketing Research** Steve D'Alessandro, Hume Winzar, Ben Lowe, William Zikmund, 2020-06-18 *Marketing Research 5e* equips students with the knowledge and skills required to successfully undertake marketing research. Combining a solid theoretical foundation with a practical step-by-step approach, the marketing research process is explored through a learning model that is constantly reinforced throughout the text. Using local and international examples, data sets and case studies to explain traditional marketing research methods, *Marketing Research* also examines new theories and techniques. To reflect emerging industry practices, each stage of research reporting is detailed as well as a range of presentation methodologies. For analysing data, the text covers both SPSS and Excel outputs. This text is indispensable for students studying marketing research in any business or marketing course. Premium online teaching and learning tools are available on the MindTap platform. *Intermediate Microeconomics* Steve Erffle, 2017-09-14 The overarching premise of this text is that microeconomics is most effectively learned in an active learning, interactive environment. Students have access to more than 200 Interactive Excel Figures in the online text that allow them to move the graphs using sliders and click boxes. This interactivity helps students understand how graphic elements relate to one another. These files do not require knowledge of Excel. More figures than are typical, and many of the figures involve multiple scenarios of the same basic graph. Often the text employs interactive questions that require interpreting these scenarios; questions posed are answered at the bottom of the page. Despite the geometric orientation, this text is not light on algebraic analysis. The geometry is backed up by the relevant algebra. More than 500 equations are numbered for easy reference both within and across chapters. And just like the geometry, the algebra is essentially error-free because it was used to create the graphs. The geometric orientation is perfect for the non-calculus-enhanced classroom, but the text can be readily used in a calculus-based class because a calculus treatment of the material is provided in appendices and endnotes, and calculus-based problems are included in the *Intermediate Microeconomics: An Interactive Approach Workbook*.

**Analysis of Biological Networks** Björn H. Junker, Falk Schreiber, 2011-09-20 An introduction to biological networks and methods for their analysis. Analysis of Biological Networks is the first book of its kind to provide readers with a comprehensive introduction to the structural analysis of biological networks at the interface of biology and computer science. The book begins with a brief overview of biological networks and graph theory, graph algorithms and goes on to explore global network properties, network centralities, network motifs, network clustering, Petri nets, signal transduction and gene regulation networks, protein interaction networks, metabolic networks, phylogenetic networks, ecological networks and correlation networks. Analysis of Biological Networks is a self contained introduction to this important research topic, assumes no expert knowledge in computer science or biology and is accessible to professionals and students alike. Each chapter concludes with a summary of main points and with exercises for readers to test their understanding of the material presented. Additionally, an FTP site with links to author provided data for the book is available for deeper study. This book is suitable as a resource for researchers in computer science, biology, bioinformatics, advanced biochemistry and the life sciences and also serves as an ideal reference text for graduate level courses in bioinformatics and biological research.
