

User Manual

Introduction

This manual describes the uses for the EOTec 2C20, a "ControlNet™" communications module specially designed for connecting ControlNet devices on the Physical Media Layer in industrial field applications.

ControlNet is swiftly being adopted by the industrial automation and control industry. Industrial applications often demand rugged, robust equipment that can provide high reliability in settings far removed from a comfortable, climate-controlled office environment.

Devices attached to a network normally cannot tell what is happening elsewhere on the system. As a result, the responsibility for monitoring the network must fall on the ControlNet communication equipment that connects these devices. Real-time alarms are a vital feature to inform system administrators and operators when a problem exists on the network.

Introducing the EOTec 2000 Modular ControlNet Stack

The EOTec 2000 Modular ControlNet Stack is designed to give reliable operation in harsh industrial environments. As shown in figure 1-1, Weed Instrument provides a modular solution called a ControlNet Stack for addressing various communications topologies. Create the ControlNet Stack that meets your needs; for single point-to-point connections, cascade or extend this into a daisy-chain, or branch out into a star configuration. Or you can combine all three topologies in one network. The 2C20 module can be used alone for electrical communications on a ControlNet trunk line or optical modules can be added for greater distances between your ControlNet devices.

Fiber optic technology provides many advantages for industrial control applications. These include EMVRFI immunity, the ability to run fiber optic cable through hazardous areas, and the ability to connect long distance communication links.

Each EOTec ControlNet Stack comes with LED indicators for local determination of communication failures. In addition, Weed offers options such as redundant power supplies or power supplies with alarm relay contacts that can be wired to provide failure information at a remote location. Also, all fiber optic models have optional diagnostics ports ("2Dxx" series) to provide a 4 to 20mA diagnostic output for use in determining optical power level (light intensity) of any or all glass fiber cables.
