we systemically improve the quality of classroom instruction and the learning and achievement of students In an era when isolated examples of excellence are not good enough we need systems that support improvement and excellence for all This book describes how systems can effectively engage in this complex challenging and crucial work The authors explore three core competencies of high performing school systems 1 understanding what the work is a deep understanding of the core business of facilitating learning a vision of what that looks like and an awareness of where the system is in relation to that vision 2 knowing how to do the work a theory of action for improving instruction a focus on key strategies and effective alignment of resources and 3 building the individual and organizational habits of mind that foster continuous improvement Each chapter includes examples that illustrate key concepts in action questions to spur self assessment in key areas of competence and tools and resources for building capacity at different levels and stages of development **Categoricity**

John T. Baldwin, 2009 Modern model theory began with Morley's categoricity theorem A countable first order theory that has a unique up to isomorphism model in one uncountable cardinal κ is categorical in cardinality if and only if the same holds in all uncountable cardinals Over the last 35 years Shelah made great strides in extending this result to infinitary logic where the basic tool of compactness fails He invented the notion of an Abstract Elementary Class to give a unifying semantic account of theories in first order infinitary logic and with some generalized quantifiers Zilber developed similar techniques of infinitary model theory to study complex exponentiation This book provides the first unified and systematic exposition of this work The many examples stretch from pure model theory to module theory and covers of Abelian varieties Assuming only a first course in model theory the book expounds eventual categoricity results for classes with amalgamation and categoricity in excellent classes Such crucial tools as Ehrenfeucht Mostowski models Galois types tameness omitting types theorems multi dimensional amalgamation atomic types good sets weak diamonds and excellent classes are developed completely and methodically The occasional reliance on extensions of basic set theory is clearly laid out The book concludes with a set of open problems Book Jacket

Philosophy and Memory Traces John Sutton, 1998-03-05 Philosophy and Memory Traces defends two theories of autobiographical memory One is a bewildering historical view of memories as dynamic patterns in fleeting animal spirits nervous fluids which rummaged through the pores of brain and body The other is new connectionism in which memories are stored only superpositionally and reconstructed rather than reproduced Both models argue John Sutton depart from static archival metaphors by employing distributed representation which brings interference and confusion between memory traces Both raise urgent issues about control of the personal past and about relations between self and body Sutton demonstrates the role of bizarre body fluids in moral physiology as philosophers from Descartes and Locke to Coleridge struggled to control their own innards and impose cognitive discipline on the phantasmal chaos of association Going on to defend connectionism against Fodor and critics of passive mental representations he shows how problems of the self are implicated in cognitive science *The Publishers' Trade List Annual*, 1893 **Michigan School**
