Exploring Corpora for ESP Learning Laura Gavioli, 2005-01-01 This book investigates the effects of corpus work on the process of foreign language learning in ESP settings It suggests that observing learners at work with corpus data can stimulate discussion and re thinking of the pedagogical implications of both the theoretical and empirical aspects of corpus linguistics The ideas presented here are developed from the Data Driven Learning approach introduced by Tim Johns in the early nineties The experience of watching students perform corpus analysis provides the basis for the two main observations in the book a corpus work provides students with a useful source of information about ESP language features b the process of search and discovery implied in the method of corpus analysis may facilitate language learning and promote autonomy in learning language use The discussion is carried out on the basis of a series of corpus based explorations by students and provides suggestions for developing new tasks and tools for language learners

*Architecting Networked Engineered Systems* Jelena Milisavljevic-Syed, Janet K. Allen, Sesh Commuri, Farrokh Mistree, 2020-02-25 In this monograph the authors demonstrate how the integration of adaptability operability and re configurability in the design of complex systems is indispensable for the further digitization of engineering systems in smart manufacturing Globalization of the customer base has resulted in distributed and networked manufacturing systems However current design methods are not suitable to address variations in product design changes in production scale or variations in product quality necessitated by dynamic changes in the market

Adaptability operability and re configurability are key characteristics that are necessary to address the limitations of the current methods used to design networked manufacturing systems In recent years the digital transformation driving Industry 4 0 has had an enormous impact on globally distributed manufacturing Digitalisation the integration of digital technology into networked engineered systems is increasingly being adopted to respond to changes in the market This is achieved by means of a the concurrent design of adaptable systems b addressing flexibility in design parameters c conducting an operability analysis and d employing a reconfiguration strategy to address faults and variances in product quality and re establish connectivity among the elements in the system The design of manufacturing systems in the age of Industry 4 0 is addressed in this monograph The authors introduce the concept of a smart platform and a computational framework for the digitalization of networked manufacturing systems They also suggest how the framework and techniques in this monograph are applicable beyond the manufacturing domain for architecting networked engineered systems in other industries such as chemical processes and health care that are being transformed through the adoption of the Industry 4 0 construct
