R Bowker Publishing,Bowker,1999-12      Arguing with Numbers James Wynn,G. Mitchell Reyes,2021-04-15 As discrete  
fields of inquiry rhetoric and mathematics have long been considered antithetical to each other That is if mathematics  
explains or describes the phenomena it studies with certainty persuasion is not needed This volume calls into question the  
view that mathematics is free of rhetoric Through nine studies of the intersections between these two disciplines *Arguing  
with Numbers* shows that mathematics is in fact deeply rhetorical Using rhetoric as a lens to analyze mathematically based  
arguments in public policy political and economic theory and even literature the essays in this volume reveal how  
mathematics influences the values and beliefs with which we assess the world and make decisions and how our worldviews  
influence the kinds of mathematical instruments we construct and accept In addition contributors examine how concepts of  
rhetoric such as analogy and visuality have been employed in mathematical and scientific reasoning including in the  
theorems of mathematical physicists and the geometrical diagramming of natural scientists Challenging academic orthodoxy  
these scholars reject a math equals truth reduction in favor of a more constructivist theory of mathematics as dynamic  
evolving and powerfully persuasive By bringing these disparate lines of inquiry into conversation with one another *Arguing  
with Numbers* provides inspiration to students established scholars and anyone inside or outside rhetorical studies who  
might be interested in exploring the intersections between the two disciplines In addition to the editors the contributors to  
this volume are Catherine Chaput Crystal Broch Colombini Nathan Crick Michael Dreher Jeanne Fahnestock Andrew C Jones  
Joseph Little and Edward Schiappa      **Resources in Education** ,1997      **Aliens Like Us?** Anthony Aveni,2025-03-18 In  
this authoritative accessible and at times funny and irreverent work distinguished anthropologist Anthony Aveni speaks to  
the trained astrophysicist and the curious layperson alike about a simple but previously unexplored question Why do we  
assume aliens if they are really out there behave just like us Aveni s newest work departs from the usual scientific treatment  
of extraterrestrial intelligence by probing the historical and widely neglected anthropological record which offers relevant  
analogous incidents of contact among terrestrial cultures Beginning with theories of the evolution of life and culture  
advocated by astrobiologists *Aliens Like Us* explores how the Western cultural imagination is influenced by ways of knowing  
that are deeply embedded in the minds of the questioners for example how we consider the ownership of property the idea of  
progress and even the way we classify things The lessons of anthropology offer not only value structures from other cultures  
that differ profoundly from our own but also testify to the diverse ways in which alien cultures interact Finally on the

question of potential first contact Aveni closes with a fascinating exploration of the image of extraterrestrials in popular culture that is derived in part from the hugely influential realm of science fiction *The Australian Mathematics Teacher*, 1995
