Genesis Pro Features

Draw

The main handle section on your Genesis Pro bow is machined 6061-T6 aluminum. This material is engineered to provide the Genesis Pro with optimal balance while being both extremely durable and very lightweight.

Larger cam-to-cam distance: An increased range of cam-to-cam adjustment accommodates many modern rests and allows for increased bow string tension. The Genesis Pro does not include a rest. Choose a rest that suits your needs and shooting style.

Idle Wheel

The idle wheel is located at the upper limb of the bow. The main function of the idle wheel is to transfer draw energy from the bow limbs back through the string to the arrow in a smooth and consistent way.

Drawings in the idle wheel are made of a very low-friction synthetic material which reduces energy dissipation.

Limbs and Limb Bolts

The limbs on your Genesis Pro bow are adjustable to suit you or the rest. They store the potential energy you put into the bow as the string is released. As the moment of release, the stored potential energy is transferred into string tension, and the arrow is propelled toward the target. The limb bolts adjust the draw to the rest and are also used to adjust the draw length on your bow. Using a 1/4" hex wrench, the limb bolts can be turned in a counter-clockwise direction to decrease the draw length of the bow to a minimum of 15 lbs. Turning the limb bolts clockwise will increase the bow to its maximum of 35 lbs. One full turn equals approximately 1/4 lbs. of draw weight. The limb bolts on each limb should always be turned the same number of turns when adjusting bow draw weight.

Genesis Pro Bowstring System

The Genesis Pro bow features single cam design. The adjustable cam allows the bow to maintain its set percentage throughout the draw cycle. The adjustable cam acts as the cam rollers and guides the bow string. When the bowstring is released, the cam creates a "hook effect," which results in a better arrow while increasing bow speed.

Draw Stop

Customizing the Genesis Pro to your draw length is easy!

The draw stop on the Genesis Pro is adjusted with an Allen wrench. Simply turn the draw stop counter-clockwise until it is completely removed. Draw it to the desired draw stop position, tighten with security in place. Use the larger diameter draw stop to adjust to 12" (approx.) increments and the smaller diameter draw stop to adjust to 1" (approx.) increments.

Tip

The double hooking up on your Genesis bow is actually designed to fit the contours of your hand, providing both comfort and consistency.

Shooting

Like every other Genesis Pro bow with a high-strength, double hooking back line, the bow is designed to provide superior performance. Shooting the bow provides superior performance, ensuring that the maximum amount of the bow's stored energy is transferred to the arrow.

Power Cable and Cable Guard

The power cable is the second component of the bowstring assembly. It is anchored at the ends on the upper limb and wraps around the idle wheel back on the rest which is mounted on the lower limb.

The cable guard is the metal rod which supports the sliding cable cage that keeps the cable safely off to one side and out of the light path of the arrow.

Hooking Point

You or your local pro shop must properly install a string rest to ensure proper arrow position on the string for repeatable accuracy.

WARNING: Before setting the arrow rest on or near the bow, make sure the arrow rest is in proper weight and adjust to your bow's draw weight and draw length. Use and follow your arrow manufacturer's recommendations.
