

Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- 1. Circles are females and squares are males.
- 2. A shaded circle or square indicates that a person has the trait.

The pedigree chart below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of persons 1 - 15. Then answer the questions below the table.

What do you know about the genotype of the mother of 1?

These parents (1) had a color-blind son (2). His dad has no redness, but color-blindness came from his mother. Since the mother is not shaded, she must be a carrier.

Number 4 is colorblind, just like his father. Where could he get his allele for colorblindness?

Yes, he inherited his allele for colorblindness from his mother. Must be a carrier then. If colorblindness from their father.

Number numbers 7 and 8 were colorblind. How did they have a colorblind son (12)?

That mother must be a carrier for colorblindness.

What must be the genotype of the parents of a colorblind daughter? Explain.

To have a color-blind daughter, she must have the recessive allele from each parent. Her father must be X^b Y and mother must have to be X^b X^b.

If number 11 has a normal son, what is the probability that their son will be colorblind?

$X^b X^b \times X^B Y \rightarrow$ all of their sons will not be colorblind.
 (11) (normal male)
