

## Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- 1. Circles are females and squares are males.
- 2. A shaded circle or square indicates that a person has the trait.

The pedigree chart below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of person 1-15. Then answer the questions below the table.

What do you know about the genotype of the mother of 1-1?

These parents (1-1 and 1-2) had a color-blind son (1-4). His dad has no recessive, but color-blind allele. From his mother, since the mother is not shaded, she must be a carrier.

Number 1-5 is colorblind just like her father. Where could she get her allele for colorblindness?

She inherited her allele for colorblindness from her mother. Must have been that 1-2's wife was a carrier. From their father.

Number numbers 1-7 and 1-8 were colorblind. How did they have a colorblind son (1-12)?

Both mother and father are carriers for colorblindness.

What must be the genotype of the parents of a colorblind daughter? Explain.

To have a color-blind daughter, she must have the recessive allele from each parent. Her father must be  $X^bY$  and mother must have to be  $X^bX^b$ .

If mother 1-1 has a normal son, what is the probability that their son will be colorblind?

$X^BX^b \times X^BY \rightarrow$  all of their sons will have color-blindness.
