Neotropical Gradients and Their Analysis Randall W. Myster, 2023-03-31 The importance of the Neotropics to the world's climate biogeochemical cycling and biodiversity cannot be questioned This book suggests that gradients are key to understanding both these issues and Neotropical ecosystem structure function and dynamics in general Those gradients are either spatial temporal or spatio temporal where many temporal and spatio temporal gradients are initiated by disturbances e.g tree fall landslide cultivation And in particular for the Neotropics three large spatial gradients latitude longitude altitude elevation are of critical importance The editor has over 30 years of experience investigating Neotropical gradients in Costa Rica Puerto Rico Peru and Ecuador and has published 5 previous books on different aspects of the Neotropics Once again he has assembled top shelf Neotropical scientists and researchers here to focus on gradients their nature interactions and how they structure ecosystems

Mangrove Ecosystems: A Global Biogeographic Perspective Victor H. Rivera-Monroy, Shing Yip Lee, Erik Kristensen, Robert R. Twilley, 2017-11-03 This book presents a comprehensive overview and analysis of mangrove ecological processes structure and function at the local biogeographic and global scales and how these properties interact to provide key ecosystem services to society The analysis is based on an international collaborative effort that focuses on regions and countries holding the largest mangrove resources and encompasses the major biogeographic and socio economic settings of mangrove distribution Given the economic and ecological importance of mangrove wetlands at the global scale the chapters aim to integrate ecological and socio economic perspectives on mangrove function and management using a system level hierarchical analysis framework The book explores the nexus between mangrove ecology and the capacity for ecosystem services with an emphasis on thresholds multiple stressors and local conditions that determine this capacity The interdisciplinary approach and illustrative study cases included in the book will provide valuable resources in data information and knowledge about the current status of one of the most productive coastal ecosystem in the world

Development and Tests of Two Null Theories of Ecological Communities Annette Marie Ostling, 2004

Community Ecology Gary G. Mittelbach, Brian J. McGill, 2019-05-24 Community ecology has undergone a transformation in recent years from a discipline largely focused on processes occurring within a local area to a discipline encompassing a much richer domain of study including the linkages between communities separated in space metacommunity dynamics niche and neutral theory the interplay between ecology and evolution eco evolutionary dynamics and the influence of historical and regional processes in shaping patterns of biodiversity To fully understand these new developments however

students continue to need a strong foundation in the study of species interactions and how these interactions are assembled into food webs and other ecological networks This new edition fulfils the book s original aims both as a much needed up to date and accessible introduction to modern community ecology and in identifying the important questions that are yet to be answered This research driven textbook introduces state of the art community ecology to a new generation of students adopting reasoned and balanced perspectives on as yet unresolved issues Community Ecology is suitable for advanced undergraduates graduate students and researchers seeking a broad up to date coverage of ecological concepts at the community level

Metacommunity Ecology Mathew A. Leibold,Jonathan M. Chase,2018 Metacommunity ecology links smaller scale processes that have been the provenance of population and community ecology such as birth death processes species interactions selection and stochasticity with larger scale issues such as dispersal and habitat heterogeneity Until now the field has focused on evaluating the relative importance of distinct processes with niche based environmental sorting on one side and neutral based ecological drift and dispersal limitation on the other This book moves beyond these artificial categorizations showing how environmental sorting dispersal ecological drift and other processes influence metacommunity structure simultaneously Mathew Leibold and Jonathan Chase argue that the relative importance of these processes depends on the characteristics of the organisms the strengths and types of their interactions the degree of habitat heterogeneity the rates of dispersal and the scale at which the system is observed Using this synthetic perspective they explore metacommunity patterns in time and space including patterns of coexistence distribution and diversity Leibold and Chase demonstrate how these processes and patterns are altered by micro and macroevolution traits and phylogenetic relationships and food web interactions They then use this scale explicit perspective to illustrate how metacommunity processes are essential for understanding macroecological and biogeographical patterns as well as ecosystem level processes Moving seamlessly across scales and subdisciplines Metacommunity Ecology is an invaluable reference one that offers a more integrated approach to ecological patterns and processes
