Sci-Tech Libraries of the Future Cynthia Steinke, 2019-12-06 What will future sci tech libraries be like Who will be the key players In this insightful volume first published in 1992 leaders in sci tech librarianship reflect on their years in the profession and predict how the sci tech library will look in ten years It takes a close look at the revolution in the communication of scientific information and how technology has transformed the process of knowledge delivery and acquisitions It prepares libraries to react to new channels of scholarly communication that in the future may challenge the viability of the research library Most importantly it emphasizes how the rapid pace of change in science communication and computers has pushed libraries to aggressively seek to become central to the knowledge formation and transfer process just to survive These provocative chapters reveal how sci tech librarians need to work with scientists and engineers to understand their changing information needs and to participate in the planning and development of new information systems This book examines all areas of the scientific process that will be affected by change the way research is conducted communicated transferred stored and delivered The changes discussed in this book encompass researchers librarians information managers publishers and users Some of the important topics discussed include an in depth analysis of the information needs of science and engineering and how to best develop the electronic means to meet them leadership challenges in the future electronic computer or virtual library concern over the quality of information services for scientists delivered by non scientist librarians a ten year prediction for sci tech librarians and sci tech publishers the science library building of the future the impact of increasingly interdisciplinary scientific research and the effect of federal policy on sci tech libraries
