Development Gerald Young, 2019-02-28 The third book in Young's unique trilogy on causality and development continues to locate and define the central role of causality in biopsychosocial and network systems development and as a unifying concept of psychology itself. As a way of discussing causality in general, initially the book focuses on the acquisition of handedness and hemispheric specialization in infancy and childhood and their relations to the development of cognition, language and emotion in particular. The second part of the book elaborates an innovative 25 step Neo Eriksonian model of development across the life course based on a Neo Piagetian model covered in the previous books, completing a step by step account of development over the lifespan cognitively and socio emotionally. It builds on the concept of neo stage which is network based. From this conceptual synthesis, the author's robust theory of development and causality identifies potential areas for psychological problems and pathology at each developmental step as well as science based possibilities for their treatment. This elegant volume Presents a clear picture of the development of handedness and laterality in more depth than has been attempted in the literature to date. Traces the causal concepts of activation, inhibition, coordination and networking in the context of development. Describes in depth a novel 25 step Neo Eriksonian lifespan model of development. Reviews relevant research on Piagetian and Eriksonian theories in development. Emphasizes the clinical utility of the described 25 step Neo Eriksonian approach to lifespan development. A significant step in understanding this highly nuanced subject and synthesizing a broad knowledge base. Causality and Development will find an interested audience among developmental psychologists, mental health practitioners, academics and researchers. *Management and Leadership for Nurse Managers* Russell C.
