All members of the crew should become thoroughly familiar with the location and operation of controls, the correct operating procedures, the emergency stopping operation and the safety procedures applicable to the unit before operating. This course is a complete review of essential and can be reinforced in many ways. Carefully review the operating procedures outlined below and in the instructional pages of the hand rating chart at the instructor's station.

Abstract

Systems like following checklists for entering the car or apartment

- Inspect in any adverse conditions such as poor hydraulic fluid or tampering of other the other one, any tampering which may have most time or a serious sign of damage or improper maintenance
- Check that the lines are released in the proper position
- Check the level of the hydraulic reservoir
- Check the operation of the 'stop' and 'down' valves
- Check for missing and loose bolts
- Check for damaged structural members and welds
- Check all rope guides and cable hangers
- Check all shrouds for free turning
- Check the hoisting cable for kinks, broken strands or other damage it accompanied with its shrouds & the 'hoisting' & 'lowering' section
- Check to see that the hydraulic hoses are in good condition and show no signs of leaking. The hoses should be free-flow and no obstructions and there should be no evidence of leaking. Any damage or leakage should be replaced immediately
- Check hydraulic A and air-line brake system or A and air-line brake system for proper operation

Water Control and Interference's manual for control stations.

Key Operation Reports and Allocation Tables

1. Check the electrical wiring connecting the output units of the system to physical storage.
2. Check the air flow block switches and weights for the furnace.

The following tests shall be performed with care to prevent damage to the machine or injury to personnel. Proper functioning of the system requires successful completion of these tests before operating the machine.

If the operator cannot use the load-handling facility supporting the chosen mode, he/she has to use an auxiliary input device, such as the load handling device. The operator will be progressively lost the machine control and, hence, may fall out of control of the system and lose his/her property. If the LHM is not a VLM system, it is not a forwarding property, lifting the anti-two-block weight will not enhance the load-bearing ability in the middle drive system for the VLM system, and will not lock the crane mechanism to lift, lower, or stop, and will break down.

- Check the two-piece fabric alarm light and the audible alarm by performing one of the following tests:
 - Intermittently lift the weight attached to the one-piece fabric switches. When the weight is lifted, the audible alarm for the LHM or optional audible alarm for the optional MCA system should sound and the two-piece fabric alarm light should light.
 - Slightly raise the main beam load handling device to create a potential two-piece condition. When the load handling device lifts the weight, the audible alarm should sound, the two-piece fabric alarm light should light and the motion of the load handling device should be stopped. Lower the load handling device slowly to return to the condition.
 - Slightly extend (telescope) the beam to create a potential two-piece condition. When the load handling device lifts the weight, the audible alarm should sound, the two-piece fabric alarm light should light and the fabric telescope should extend (telescope) and the motion of the load handling device should be stopped. Lower the load handling device slowly to approximate the condition.

▶ FOLLOW-UP

If the light and siren alarm is not function as described and the alarm components are not stopped, the system is not working properly. The malfunction shall be corrected before operating the alarm.

- a. If the crane is equipped with a boom extension that is designed and meant to work, repeat the test procedure for the boom extension at the same weight.
