QUICK-CHECK questions

- 1 **What kinds of haemoglobins are normally found in the red blood cells of people after birth?**
Within a year after birth, the major haemoglobin found in a person's red blood cells is haemoglobin A (approximately 98 per cent) with a smaller amount of haemoglobin A2 (approximately 2 per cent).
- 2 **What kinds of protein chains make up haemoglobin A?**
Two kinds of protein chains make up haemoglobin A, namely alpha chains and beta chains. Each haemoglobin A molecule is composed of two alpha chains and two beta chains and each of these four protein chains has an associated haem group. (Haem groups are iron-containing molecules that play a key role in binding oxygen.)
- 3 **What role does Desferal® play in the treatment of thalassaemia?**
In beta-thalassaemia, the red blood cells die more rapidly than normal, resulting in anaemia. The haemoglobin from these red blood cells breaks down and iron from the haem portion of the haemoglobin accumulates in abnormal amounts in the body organs. The drug Desferal® is a chemical agent that binds to this excess iron preventing its deposition within the body and allowing it to be excreted.
- 4 **Where does transcription occur? What is the end product of this process?**
The process of gene transcription occurs within the nucleus of a cell. The end product of transcription is messenger RNA (mRNA).
- 5 **A template strand of DNA includes the base sequence:**
... T A T C G G C A T ...
Write the base sequence of the complementary strand.
The base sequence in the complementary strand is:
... A T A G C C G T A ...
- 6 **A strand of mRNA includes the base sequence:**
... A U G U A U C C G ...
Write the base sequence of the DNA template.
The DNA template strand that produced this mRNA includes the complementary sequence:
... T A C A T A G G C ...
- 7 **List two ways in which RNA differs from DNA.**
Differences between DNA and RNA include:
 - 1 DNA is typically a double-stranded molecule, whereas RNA is single stranded.
 - 2 DNA contains the sugar deoxyribose, whereas the sugar present in RNA is ribose.
 - 3 The nucleotide bases in DNA are A (adenine), T (thymine), C (cytosine) and G (guanine), whereas the nucleotide bases in RNA are A, U (uracil), C and G.

The Biomimicry Revolution Henry Dicks, 2023-03-14 Winner 2024 Symposium Book Award Canadian Society for Continental Philosophy Modernity is founded on the belief that the world we build is a human invention not a part of nature The ecological consequences of this idea have been catastrophic We have laid waste to natural ecosystems replacing them with fundamentally unsustainable human designs With time running out to address the environmental crises we have caused our best path forward is to turn to nature for guidance In this book Henry Dicks explores the philosophical significance of a revolutionary approach to sustainable innovation biomimicry The term describes the application and adaptation of strategies found in nature to the development of artificial products and systems such as passive cooling

techniques modeled on termite mounds or solar cells modeled on leaves Dicks argues that biomimicry typically seen as just a design strategy can also serve as the basis for a new environmental philosophy that radically alters how we understand and relate to the natural world By showing how we can imitate emulate and learn from nature biomimicry points us toward a genuinely sustainable way of inhabiting the earth Rooted in philosophy The Biomimicry Revolution has profound implications spanning the natural sciences design architecture sustainability studies science and technology studies and the environmental humanities It presents a sweeping reconception of what philosophy can be and offers a powerful new vision of terrestrial existence *Study Guide to Accompany The Nature of Life* Deborah M. Social Psychology Thomas E. Heinzen, Thomas Heinzen, Wind Goodfriend, 2017-11-30 Weaving stories from personal experiences with compelling examples from everyday life Social Psychology introduces the field as an evolving science driven conversation prompting students to become active participants in the social psychology dialogue *Nature*, 1895 *The British Nature Book* Sidney Newman Sedgwick, 1922 *Decoding Reality* Vlatko Vedral, 2012-02-23 For a physicist all the world is information The Universe and its workings are the ebb and flow of information We are all transient patterns of information passing on the recipe for our basic forms to future generations using a four letter digital code called DNA In this engaging and mind stretching account Vlatko Vedral considers some of the deepest questions about the Universe and considers the implications of interpreting it in terms of information He explains the nature of information the idea of entropy and the roots of this thinking in thermodynamics He describes the bizarre effects of quantum behaviour effects such as entanglement which Einstein called spooky action at a distance and explores cutting edge work on harnessing quantum effects in hyperfast quantum computers and how recent evidence suggests that the weirdness of the quantum world once thought limited to the tiniest scales may reach into the macro world Vedral finishes by considering the answer to the ultimate question where did all of the information in the Universe come from The answers he considers are exhilarating drawing upon the work of distinguished physicist John Wheeler The ideas challenge our concept of the nature of particles of time of determinism and of reality itself This edition includes a new foreword from the author reflecting on changes in the world of quantum information since first publication Oxford Landmark Science books are must read classics of modern science writing which have crystallized big ideas and shaped the way we think *National Geographic Answer Book* National Geographic, 2011 Covers everything from earth sciences to astronomy from climate and habitats to human arts and cultures from ancient history to cutting edge technology and descriptions flags and statistics of all the countries in the world

Explanation and Teleology in Aristotle's Science of Nature Mariska Leunissen, 2010-08-26 In Aristotle's teleological view of the world natural things come to be and are present for the sake of some function or end for example wings are present in birds for the sake of flying Whereas much of recent scholarship has focused on uncovering the meta physical underpinnings of Aristotle's teleology and its contrasts with his notions of chance and necessity this book examines Aristotle

s use of the theory of natural teleology in producing explanations of natural phenomena Close analyses of Aristotle s natural treatises and his Posterior Analytics show what methods are used for the discovery of functions or ends that figure in teleological explanations how these explanations are structured and how well they work in making sense of phenomena The book will be valuable for all who are interested in Aristotle s natural science his philosophy of science and his biology
