John Harper Nature conservation has changed from an idealistic philosophy to a serious technology Ecology the science that underpins the technology of conservation is still too immature to provide all the wisdom that it must It is arguable that the desire to conserve nature will in itself force the discipline of ecology to identify fundamental problems in its scientific goals and methods In return ecologists may be able to offer some insights that make conservation more practicable Harper 1987

The idea that nature species or communities is worth preserving rests on several fundamental arguments particularly the argument of nostalgia and the argument of human benefit and need Nostalgia of course is a powerful emotion With some notable exceptions there is usually a feeling of dismay at a change in the status quo whether it be the loss of a place in the country for walking or rambling the loss of a painting or architectural monument or that one will never again have the chance to see a particular species of bird or plant *Marketing Management MCQ (Multiple Choice Questions)* Arshad Iqbal, 2019-05-17
