Electrochemistry Lab 19b:

Electroactive Polymer Electrochemistry Michael E.G. Lyons, 2013-06-29 The development of tailor-made electrode surfaces using electroactive polymer films has been one of the most active and exciting areas of electrochemistry over the last 15 years. The properties of these materials have been examined by a wide range of scientists from a variety of perspectives and now electroactive polymer research is considered to be a reasonably mature area of research endeavor. Much is now understood about the fundamental mechanism of conduction in these materials. A wide range of electrochemical techniques may be used to probe the conductivity processes in these materials and more recently a number of in situ spectroscopic techniques have been used to further elucidate the structure of these materials. The in situ spectroscopies and allied techniques have also been used to obtain correlations between structure and redox activity. The applications found for electroactive polymers are many and varied and range from thin film amperometric chemical and biological sensors, electrocatalytic systems, drug delivery devices and advanced battery systems through to molecular electronic devices. The research literature on electroactive polymers is truly enormous and can daunt even the most hardened researcher. The vast quantity of material reported in the literature can also intimidate beginning graduate students. Hence the present book. The original idea for this book arose as a result of a series of lectures on chemically modified electrodes and electroactive polymers given by the writer to final year undergraduates at Trinity College Dublin.

U.S. Government Research Reports, 1963 *General Catalog* University of Missouri, 1914 Corrosion Monitoring in Nuclear Systems EFC 56 Stefan Ritter, Anders Molander, 2017-09-20 Corrosion remains one of the key issues affecting the performance and availability of nuclear power plants. Therefore reliable in plant corrosion monitoring methods are essential both for the future operation of existing plants and to ensure the safety of future nuclear waste disposal systems. In two parts this book was stimulated by a workshop organised by EFC Working Party 4 on Nuclear Corrosion and the European Cooperative Group on Corrosion Monitoring of Nuclear Materials EGC COMON. The first part deals mainly with research into the detection of stress corrosion crack initiation in nuclear power plant environments essentially high temperature water at around 300 °C by various methods particularly the electrochemical noise technique but also including the electrochemical impedance, acoustic emission and direct current potential drop methods. The second part addresses the goal to develop in situ techniques and includes examples of the application of electrochemical corrosion potential monitoring. This book will be of particular interest to scientists and engineers concerned with the mitigation of corrosion in nuclear systems.
