

## Electromagnetic Energy and Light

How does light travel? Do different colors of light travel at the same speed?

### What?

Light is electromagnetic energy. The visible light spectrum is a tiny part of the electromagnetic spectrum. The wavelength of light is the distance between two peaks (or troughs) of a wave. The frequency of light is the number of waves that pass a point in a given amount of time. The speed of light is the distance that light travels in a given amount of time. The speed of light is constant in a vacuum, but it can change in different media. The speed of light is approximately  $3.0 \times 10^8$  m/s in a vacuum.

### Model 1 - White Light

1. How do you know the light is white light? What evidence do you have to show that it is white light?
2. What happens to white light when it passes through a prism?
3. Why can the colors be split out like this in Model 1, just like "Red" waves have "Red"? (What evidence do you have?)
4. Do all colors of light travel at the same speed?
5. Do all colors of light have the same energy? If no, what color has the highest energy and the lowest energy (explain)?

6. Compare the light spectrum in Model 1.
  - a. What color corresponds to the highest wavelength?
  - b. What color corresponds to the lowest wavelength?
  - c. What is the color that has the highest frequency? What about the lowest frequency?
