Basic Probability Theory with Applications Mario Lefebvre, 2009-10-03 The main intended audience for this book is undergraduate students in pure and applied sciences especially those in engineering Chapters 2 to 4 cover the probability theory they generally need in their training Although the treatment of the subject is surely sufficient for non-mathematicians I intentionally avoided getting too much into detail For instance topics such as mixed type random variables and the Dirac delta function are only briefly mentioned Courses on probability theory are often considered difficult However after having taught this subject for many years I have come to the conclusion that one of the biggest problems that the students face when they try to learn probability theory particularly nowadays is their deficiencies in basic differential and integral calculus Integration by parts for example is often already forgotten by the students when they take a course on probability For this reason I have decided to write a chapter reviewing the basic elements of differential calculus Even though this chapter might not be covered in class the students can refer to it when needed In this chapter an effort was made to give the readers a good idea of the use in probability theory of the concepts they should already know Chapter 2 presents the main results of what is known as elementary probability including Bayes rule and elements of combinatorial analysis [Making Connections in Elementary and Middle School Social Studies](#) Andrew P. Johnson, 2006 Making Connections in Elementary and Middle School Social Studies is based on the idea that students learn more and are more motivated to learn when they are able to connect their own knowledge observations ideas imagination and emotions with the content at hand This book demonstrates how personal connections can be incorporated into social studies education while meeting NCSS thematic pedagogical and disciplinary standards It is written in a very direct reader friendly style Each chapter describes a variety of practical strategies and creative activities that novice and experienced teachers can use to make social studies more interesting and to help students make meaningful personal and academic connections Each chapter contains a wealth of classroom strategies pedagogical techniques activities and lesson plan ideas that can be used to enhance learning and make lessons more

interesting active and student centered The book covers the three types of standards that elementary and middle school teachers work with as they teach social studies o Thinking Ahead questions invite the reader to reflect on his her own experiences as they relate to the material covered in the next chapter These can be used as discussion points for a class or small group or simply as pre reading prompts to enhance comprehension o Teachers in Action boxes contain real life narratives from practicing teachers These cases are designed to expand upon key issues presented in each chapter Every case is accompanied by the author s personal reflection on the case These reflections are intended to give the reader an opinion against which he she can measure his her own reactions After each case the reader is prompted to think about the narrative presented and think about the way that his her reactions compare with those presented by the author o Go There boxes provide links to Web sites that offer additional resources for teachers lesson plans and other activities to enhance a social studies classroom This text is accompanied by a dynamic Instructor s Resources CD The CD includes classroom video footage that can be shown in class to illustrate the concepts presented in the book and stimulate class discussion
