

7. Graph (B) presents the most accurate picture. The baseline is at zero, and the bars are of equal width. The dollar bill graphic does not follow the area principle. The length and width of the smaller image are about 25% less than the length and width of the larger image, so the area of the smaller image is about 50% less than that of the larger image. This exaggerates the difference.
8. Graph (B) presents the most accurate picture, because it follows the area principle. In Graph (A), the area of the larger image is about six times that of the smaller image. This exaggerates the difference.
9. The graph is misleading, because the baseline is not at zero.
10. It presents an accurate picture, because the baseline is at zero.
11. (A) It is misleading because you can see the tops of the bars in the three-dimensional graph. This often causes them to look shorter than they really are.

12. It is misleading because the baseline is not placed at zero.

13. (i) is more accurate. The plot on the left has its baseline at zero, and presents an accurate picture. The plot on the right exaggerates the increase.
14. (C) is more accurate. Time series plot (B), with the baseline at zero, presents an accurate picture. Plot (A) exaggerates the decrease.

Extending the Concepts

15. (A)

- (B) It makes the differences look smaller, because the scale on the y-axis extends further than the largest bar height.
- (C) Figure 2.23 has a baseline of zero, and the scale on the y-axis is appropriate for the bar height.
