Ford Big-Block Parts Interchange

George Reid,2017-12-15 Over the course of performance car history and specifically muscle car history big block engines are particularly beloved and for good reason Not only are they the essence of what a muscle car is but before modern technology and stroker engines they were also the best way to make a lot of horsepower All of the Detroit manufacturers had their versions of big block engines and Ford was no exception Actually Ford was somewhat unique in that it had two very different big block engine designs during the muscle car era The FE engine was a design pioneered in the late 1950s primarily as a more powerful replacement for the dated Y block design because cars were becoming bigger and heavier and therefore necessitated more power to move What started as torquey engines meant to move heavyweight sedans morphed into screaming high performance mills that won Le Mans and drag racing championships through the 1960s By the late 1960s the design was dated so Ford replaced the FE design with the 385 series also known as the Lima design which was more similar to the canted valve Cleveland design being pioneered at the same time It didn't share the 1960s pedigree of racing success but the new design was better in almost every way it exists via Ford motorsports offerings to this day In Ford Big Block Parts Interchange Ford expert and historian George Reid covers both engines completely Interchange and availability for all engine components are covered including cranks rods pistons camshafts engine blocks intake and exhaust manifolds carburetors distributors and more Expanding from the previous edition of High Performance Ford Parts Interchange that covered both small and big block engines in one volume this book cuts out the small block information and devotes every page to the FE Series and 385 big blocks from Ford which allows for more complete and extensive coverage p p1 margin 0 0px 0 0px 0 0px 0 0px font 12 0px Arial

hot rodding through this nostalgic look at vintage speed equipment When most people think of speed parts they rewind a few decades and think back to the Ford flatheads that were so prevalent in the 1940s and 1950s However did you know that the speed parts industry began way back in the Model T era It s true As soon as vehicles were mass produced manufacturers were looking for ways to make them faster Manufacturers such as Roof Rajo Winfield Miller Frontenac and Holley made speed parts for 4 cylinder Model T engines and accomplished speeds of up to 100 mph In Vintage Speed Parts The Equipment That Fueled the Industry veteran hot rod historian Tony Thacker looks at the history of hot rodding through the eyes of speed equipment manufacturers Covered chronologically the book begins with the early 4 cylinder engines In 1932 Henry Ford introduced the flathead V 8 which was slow to be adopted as the engine of choice in racing until the parts industry caught up Once it did the flathead although interrupted by the war was the engine to run until the automobile manufacturers introduced overhead valve V 8 engines in the late 1940s Chrysler s early 1950s Hemi and Chevrolet s small block V 8 in 1955 spelled the end for the flattie Both mills dominated well into the 1970s and the speed industry was there to support all platforms in spades During that period every auto manufacturer made a V 8 worthy of modification and the speed industry boomed Eventually the speed equipment manufacturers grew to the point of becoming corporate entities as mergers and acquisitions became the much less interesting story Parts covered include special cylinder heads magnetos camshaft and valvetrain upgrades downdraft carburetors headers multiple carburetor setups and even superchargers Everyone figured out how to make engines more powerful upgrading with the type of parts that were being produced decades later even to today
