Classifying Triangles

Classify Triangles by Angles One way to classify a triangle is by the measures of its angles.

- If one of the angles of a triangle is an obtuse angle, then the triangle is an **obtuse triangle**.
- If one of the angles of a triangle is a right angle, then the triangle is a **right triangle**.
- If all three of the angles of a triangle are acute angles, then the triangle is an **acute triangle**.
- If all three angles of an acute triangle are congruent, then the triangle is an **equilateral triangle**.

Example

Classify each triangle.

All three angles are congruent, so all three angles have measure 60° . The triangle is an equilateral triangle.

The triangle has one angle that is obtuse. It is an obtuse triangle.

The triangle has one right angle. It is a right triangle.

Exercise

Classify each triangle as acute, equilateral, obtuse, or right.

Translating Euclid Gerry Stahl,2022-05-31 Translating Euclid reports on an effort to transform geometry for students from a stylus and clay tablet corpus of historical theorems to a stimulating computer supported collaborative learning inquiry experience The origin of geometry was a turning point in the pre history of informatics literacy and rational thought Yet this triumph of human intellect became ossified through historic layers of systematization beginning with Euclid s organization of the Elements of geometry Often taught by memorization of procedures theorems and proofs geometry in schooling rarely conveys its underlying intellectual excitement The recent development of dynamic geometry software offers an opportunity to translate the study of geometry into a contemporary vernacular However this involves transformations along multiple dimensions of the conceptual and practical context of learning Translating Euclid steps through the multiple challenges involved in redesigning geometry education to take advantage of computer support Networked computers portend an interactive approach to exploring dynamic geometry as well as broadened prospects for collaboration The proposed conception of geometry emphasizes the central role of the construction of dependencies as a design activity integrating human creation and mathematical discovery to form a human centered approach to mathematics This book chronicles an iterative effort to adapt technology theory pedagogy and practice to support this vision of collaborative dynamic geometry and to evolve the approach through on going cycles of trial with students and refinement of resources It thereby provides a case study of a design based research effort in computer supported collaborative learning from a human centered informatics perspective
