Isogeometric Analysis For Engineers Via Matlab John Edward Akin,2024-11-12 This unique compendium approaches
the relatively new Isogeometric Analysis IGA methods at senior undergraduates level in engineering or applied mathematics
It describes the differences between the well established Finite Element Analysis FEA methods and why they are being
replaced or enhanced by the latest developments in IGA The book begins with summaries of the concepts of B splines NURBS
and knot vectors which define them as exact representations of the geometry and as powerful analysis functions having
higher continuity than the FEA use of Lagrange polynomials The useful reference text includes Appendices with Matlab
scripts for creating B spline basis functions topics in computer aided geometric design CAGD from which IGA arose and
matrix operations common to IGA and FEA It also informs FEA users of the enhancements offered by IGA *Introductory
