

Program Description

- RUNG000 is a latching rung to operate the system through Master Start and Stop PB.
- RUNG001 comprises all the conversion needed to control level of the tank.
- Output of transmitter is in current signals which is 4-20mA.
- When output is 4mA, Analog Input Module converts it into 16bit equivalent hex numbers. Hence when input to Analog module is 4mA, it stores 0000h into register and when 20mA, it stores FFFFh into register. Here register N7:0. This conversion is done internally by the A-to-D converter in Analog Input Module.
- Height of the tank is 10m or 1000cm. By converting it into equivalent hex, change in value per centimeter is 66 approximately which is stored in register N7:1.
- Value of N7:1 is then multiplied with the preset value of tank level that is 900cm here.
- This multiplication is stored into N7:2 register. Digital to Analog conversion of value stored in N7:2 is performed inside the processor and equivalent mA current is received from terminal O:4.
- Current to Pneumatic converter then converts current signals into equivalent 3-15psi pneumatic signal and adjusts valve opening.

Krar, Arthur Gill, Peter Smid, 2000 Firepower in the Lab N. Patel, C. Kumar, Tony J. Beugelsdijk, Scott P. Layne, 2001-07-01 Today s world poses a triple threat to the American population infectious diseases contamination of food and water and bioattacks biowarfare or bioterrorism At least 17 countries are producing weapons of mass destruction using viruses bacteria or their toxins AIDS E coli contamination drug resistant tuberculosis and virulent flu strains are perhaps the best known of a host of disease threats What these dangers have in common is the amount of data required to achieve solutions in some cases as much as a petabit 1 followed by 15 zeros of

data is required to study large numbers of samples from widespread locations Firepower in the Lab examines how the nation can combat this triple threat by improving our ability to detect measure and monitor harmful biological agents It explores the potential of today s exciting new laboratory automation and computer technologies as well as the emerging tools of molecular biology how we can generate and analyze more data quickly and reduce human hands on involvement which inevitably introduces errors The book discusses how to improve and apply technologies such as robotics laboratory automation lab on a chip bioinformatics and Internet control innovations It reviews lessons learned from our experience with pandemic flu viruses It also presents strategies for developing new high throughput technologies including how to address the lack of public funding for critical research undertakings
