Prasad, 2010-01-08. This book on New Architecture and Urbanism: Development of Indian Traditions builds on the contributions from various architects, planners, educationists, decision makers, others from across the world who gathered together to create a forum for the promotion of traditional processes and techniques for the creation of the built environment. This forum was initiated by INTBAU India: The International Network for Traditional Building Architecture and Urbanism in India and supported by The Nabha Foundation. This book presents the arguments, axioms and case studies related to Traditional Architecture and Urbanism in a sequential format. Firstly, it examines the New ways of looking at Heritage by separating it from pure history into a living and evolving process. The book looks at what defines traditional methods and their relevance to the contemporary context. It also examines the aspects of Continuity and Contextual frameworks in the built environment. The section on Sustainable Buildings, Places and Communities explores the many facets of locally driven processes from the viewpoint of tradition and sustainability. These include many community based planning methods and their applications in shaping the built environment, aspects of environmental sustainability and on how appropriateness could be ingrained into current architectural education. Lastly, the book delves into a number of executed examples in architecture seeking to learn from tradition and examples in place making, urbanism which in turn promotes humane, walkable and connected neighbourhoods. **Renewable Energy Technologies** L. A. Kristoferson, V. Bokalders, 2013-10-22. Renewable

Energy Technologies: Their Applications in Developing Countries presents an overview and assessment of technologies for energy related projects in the rural sector of developing countries. This book discusses the important but not dominant role that new and renewable sources of energy (NARSE) will have in the Third World. Bioenergy fuel sources come from wood, fuel energy crops, agricultural residue and organic wastes, peat, biomass, briquettes, biogas and animal power. The text also describes the problems related to operating biomass engines and to the production of engine fuels such as alcohol, fuels, vegetable oil, producer gas made from wood and charcoal. These problems concern land use and site location for growing these fuel crops, government policies or subsidies as well as competition with prevailing petrol prices. Solar water heaters and photovoltaic cells can be used by households and in bigger institutions. Ongoing technological developments mainly focus on cutting down costs and better manufacturing methods. The book also addresses other NARSE such as hydro, wind and water.

power generation This book is suitable for economists environmentalists ecologists and policy makers involved in energy conservation and rural development

Case Studies in Sustainability Management and Strategy Jost

Hamschmidt,2017-11-28 With the rapidly growing importance of sustainability and corporate responsibility in a globalised world management schools are increasingly integrating long term economic environmental and social issues into their teaching and research Climate change poverty labour standards and human rights are among the many topics that future decision makers will need to face in their careers Business education needs to reflect this new reality and provide a broadened understanding of value creation in order to create economic capital while developing social and preserving natural capital Many sustainability trends also offer interesting new business opportunities that are ripe for entrepreneurial thinking Case studies can be important tools for creating learning processes on different levels students are forced to struggle with exactly the kinds of decisions and dilemmas managers confront every day In this reflection of reality the values and goals of the student are systematically challenged This can be especially valuable in the context of sustainability and strategy organisations are now continually forced to value the different aspects of sustainability and their interrelations How do social issues impact the economic bottom line How can an environmentally sound strategy create a positive impact on employee motivation and thus have measurable impact on economic performance What comes first and why But excellent case studies for management education in the field of sustainability management and strategy are rare This innovative collection has been produced to fill this gap It is based on the winning cases of an annual competition organised by oikos the international Student Organization for Sustainable Economics and Management So what makes an excellent case in sustainability management These cases have been highly praised because they provide excellent learning opportunities tell engaging stories deal with recent situations include quotations from key actors are thought provoking and controversial require decision making and provide clear take aways These cases explore both the opportunities and pitfalls companies and NGOs face in targeting sustainability issues and how their values and core assumptions impact their business strategies They deal with a myriad of issues including supply chain management stakeholder dialogue social entrepreneurship sustainable marketing ethics governance the business case for sustainability partnerships purchasing and climate change Case Studies in Sustainability Management and Strategy is an essential purchase for educators and is likely to be a widely used as a course textbook at all levels of management education Online Teaching Notes to accompany each chapter are available on request with the purchase of the book

Architecture in Development Aggregate Architectural History Collaborative,2022-04-25

This extensive text investigates how architects planners and other related experts responded to the contexts and discourses of development after World War II Development theory did not manifest itself in tracts of economic and political theory alone It manifested itself in every sphere of expression where economic predicaments might be seen to impinge on cultural factors Architecture appears in development discourse as a terrain between culture and economics in that practitioners took on the

mantle of modernist expression while also acquiring government contracts and immersing themselves in bureaucratic processes This book considers how for a brief period architects planners structural engineers and various practitioners of the built environment employed themselves in designing all the intimate spheres of life but from a consolidated space of expertise Seen in these terms development was to cite Arturo Escobar an immense design project itself one that requires radical disassembly and rethinking beyond the umbrella terms of global modernism and colonial modernities which risk erasing the sinews of conflict encountered in globalizing and modernizing architecture Encompassing countries as diverse as Israel Ghana Greece Belgium France India Mexico the United States Venezuela the Philippines South Korea Sierra Leone Singapore Turkey Cyprus Iraq Zambia and Canada the set of essays in this book cannot be considered exhaustive nor a field guide in the traditional sense Instead it offers theoretical reflections from the field based on extensive archival research This book sets out to examine the arrays of power resources technologies networking and knowledge that cluster around the term development and the manner in which architects and planners negotiated these thickets in their multiple capacities as knowledge experts as technicians as negotiators and as occasional authorities on settlements space domesticity education health and every other field where arguments for development were made
