Information Theory, Inference and Learning Algorithms David J. C. MacKay, 2003-09-25 Information theory and inference taught together in this exciting textbook lie at the heart of many important areas of modern technology communication signal processing data mining machine learning pattern recognition computational neuroscience bioinformatics and cryptography The book introduces theory in tandem with applications Information theory is taught alongside practical communication systems such as arithmetic coding for data compression and sparse graph codes for error correction Inference techniques including message passing algorithms Monte Carlo methods and variational approximations are developed alongside applications to clustering convolutional codes independent component analysis and neural networks Uniquely the book covers state of the art error correcting codes including low density parity check codes turbo codes and digital fountain codes the twenty first century standards for satellite communications disk drives and data broadcast Richly illustrated filled with worked examples and over

400 exercises some with detailed solutions the book is ideal for self learning and for undergraduate or graduate courses It also provides an unparalleled entry point for professionals in areas as diverse as computational biology financial engineering and machine learning *Applied Algebra, Algebraic Algorithms and Error-Correcting Codes* Llorenç Huguet, 1989-06-14 The present volume contains the proceedings of the AAECC 5 Conference held at Menorca Balearic Islands June 15 19 1987 The annual International AAECC Conference covers a range of topics related to Applied Algebra Error Correcting Codes Finite Algebraic Structures Computational Methods and Complexity in Algebra and Geometry For the AAECC 5 Conference 73 papers were presented Out of these thirty papers were selected for publication in the proceedings They deal with topics such as error correcting codes concerning problems of covering radius decoding methods expert systems and general results in coding theory computational algebra Gröbner basis complexity finite algebra and graphs The proceedings of the 6th conference are published as Vol 357 of the Lecture Notes in Computer Science High Spectral Density Optical Communication Technologies Masataka Nakazawa, Kazuro Kikuchi, Tetsuya Miyazaki, 2010-08-12 The growth of Internet traffic in recent years surpassed the prediction of one decade ago Data stream in individual countries already reached terabits level To cope with the petabit class demands of traffic in coming years the communication engineers are required to go beyond the incremental improvement of today's technology A most promising breakthrough would be the introduction of modulation formats enabling higher spectral efficiency than that of binary on off keying scheme virtually the global standard of fiber optic communication systems In wireless communication systems techniques of high spectral density modulation have been well developed but the required techniques in optical frequency domain are much more complicated because of the heavier modulation levels Therefore the past trials of coherent optical modulation detection schemes were not successful However the addition of high speed digital signal processing technology is the fundamental difference between now and two decades ago when trials of optical coherent communication systems were investigated very seriously This approach of digital coherent technology has attracted keen interest among communication specialists as indicated by the rapid increase in the pioneering presentations at the post deadline sessions of major international conferences For example 32 terabits transmission in a fiber experiment based on this technology was reported in post deadline session of Optical Fiber Communication Conference OFC 2009 The advancement of the digital coherent technologies will inevitably affect the network architecture in terms of the network resource management for the new generation photonic networks rather than will simply provide with huge transmission capacity **Applied Algebra, Algebraic Algorithms and Error-Correcting Codes** Shojiro Sakata, 1991-07-10 The AAECC conferences focus on the algebraic aspects of modern computer science which include the most up to date and advanced topics The topic of error correcting codes is one where theory and implementation are unified into a subject both of mathematical beauty and of practical importance Algebraic algorithms are not only interesting theoretically but also important in computer and communication engineering and many other fields This volume contains the
