## **Electromagnetic Wave Vs Mechanical Wave:**

*Electromagnetic Waves Propagation in Complex Matter* Gustaf Kron, 2016-04-01 Electromagnetic waves are waves which can travel through the vacuum of outer space Mechanical waves unlike electromagnetic waves require the presence of a material medium in order to transport their energy from one location to another Light microwaves x-rays and TV and radio transmissions are all kinds of electromagnetic waves They are all the same kind of wavy disturbance that repeats itself over a distance called the wavelength The mechanism of energy transport through a medium involves the absorption and reemission of the wave energy by the atoms of the material When an electromagnetic wave impinges upon the atoms of a material the energy of that wave is absorbed The absorption of energy causes the electrons within the atoms to undergo vibrations After a short period of vibrational motion the vibrating electrons create a new electromagnetic wave with the same frequency as the first electromagnetic wave While these vibrations occur for only a very short time they delay the motion of the wave through the medium Once the energy of the electromagnetic wave is reemitted by an atom it travels through a small region of space between atoms Once it reaches the next atom the electromagnetic wave is absorbed transformed into electron vibrations and then reemitted as an electromagnetic wave *Electromagnetic Waves Propagation in Complex Matter* emphasizes the topics of wave propagation and interaction with matters The book bridges the gap between physics and engineering in these issues
