Henry Edwards, David E. Penney, 2000 For introductory courses in Differential Equations This text provides the conceptual development and geometric visualization of a modern differential equations course while maintaining the solid foundation of algebraic techniques that are still essential to science and engineering students It reflects the new excitement in differential equations as the availability of technical computing environments like Maple Mathematica and MATLAB reshape the role and applications of the discipline New technology has motivated a shift in emphasis from traditional manual methods to both qualitative and computer based methods that render accessible a wider range of realistic applications With this in mind the text augments core skills with conceptual perspectives that students will need for the effective use of differential equations in their subsequent work and study An Introduction to Ordinary Differential Equations James C. Robinson, 2004-01-08 This

refreshing introductory textbook covers both standard techniques for solving ordinary differential equations as well as introducing students to qualitative methods such as phase plane analysis The presentation is concise informal yet rigorous it can be used either for 1 term or 1 semester courses Topics such as Euler's method difference equations the dynamics of the logistic map and the Lorenz equations demonstrate the vitality of the subject and provide pointers to further study The author also encourages a graphical approach to the equations and their solutions and to that end the book is profusely illustrated The files to produce the figures using MATLAB are all provided in an accompanying website Numerous worked examples provide motivation for and illustration of key ideas and show how to make the transition from theory to practice Exercises are also provided to test and extend understanding solutions for these are available for teachers **Solutions**
