Approaches to Plant Evolutionary Ecology G.P. Cheplick, 2015-07-01 Plant evolutionary ecology is a rapidly growing discipline which emphasizes that populations adapt and evolve not in isolation but in relation to other species and abiotic environmental features such as climate Although it departs from traditional evolutionary and ecological fields of study the field is connected to branches of ecology genetics botany conservation and to a number of other fields of applied science primarily through shared concepts and techniques However most books regarding evolutionary ecology focus on animals creating a substantial need for scholarly literature with an emphasis on plants Approaches to Plant Evolutionary Ecology is the first book to specifically explore the evolutionary characteristics of plants filling the aforementioned gap in the literature on evolutionary ecology Renowned plant ecologist Gregory P Cheplick summarizes and synthesizes much of the primary literature regarding evolutionary ecology providing a historical context for the study of plant populations from an evolutionary perspective The book also provides summaries of both traditional common gardens reciprocal transplants and modern molecular genetic approaches used to address questions about plant adaptation to a diverse group of abiotic and biotic factors Cheplick provides a rigorously written introduction to the rapidly growing field of plant evolutionary ecology that will appeal to undergraduate and graduate students with an interest in ecology and evolution as well as educators who are teaching courses on related topics

Oak Seed Dispersal Michael A. Steele, 2021-01-05 The definitive examination of oak forest evolutionary ecology Seed dispersal is a critical stage in the life cycle of most flowering plants The process can have far reaching effects on a species biology especially numerous aspects of its ecology and evolution This is particularly the case for the oaks in which the dispersal of the acorn is tied to numerous tree characteristics as well as the behavior and ecology of the animals that feed on and move these seeds to their final destination Forest structure composition and genetics often follow directly from the dispersal process while also influencing it in turn In Oak Seed Dispersal Michael A Steele draws on

three decades of field research across the globe e g the United States Mexico Central America Europe and China to describe the interactions between oaks and their seed consumers Rodents birds and insects he writes collectively influence the survival movement and germination of acorns as well as the establishment of seedlings often indicating a coevolutionary bond between oaks and their seed consumers This bond can only be understood by unraveling the complex interactions that occur in the context of factors such as partial seed consumption due to acorn chemistry scatterhoarding predation of the seed consumers by other organisms and the limiting effects of masting on insect rodent and jay damage Offering new insights on how animal mediated dispersal drives ecological and evolutionary processes in forest ecosystems Oak Seed Dispersal also includes an overview of threatened oak forests across the globe and explains how a lack of acorn dispersal contributes to many important conservation challenges Highly illustrated the book includes photographs of key dispersal organisms and tactics as well as a foreword by Stephen B Vander Wall a leading authority on food hoarding and animal mediated seed dispersal and beautiful artwork by Tad C Theimer also an accomplished ecologist *Environmental Ecology*

Atmospheric Perspectives Vlado Spiridonov, Landscape Planning with Ecosystem Services Christina von Haaren, Andrew A. Lovett, Christian Albert, 2019-06-25 Human well being depends in many ways on maintaining the stock of natural resources which deliver the services from which human's benefit However these resources and flows of services are increasingly threatened by unsustainable and competing land uses Particular threats exist to those public goods whose values are not well represented in markets or whose deterioration will only affect future generations As market forces alone are not sufficient effective means for local and regional planning are needed in order to safeguard scarce natural resources coordinate land uses and create sustainable landscape structures This book argues that a solution to such challenges in Europe can be found by merging the landscape planning tradition with ecosystem services concepts Landscape planning has strengths in recognition of public benefits and implementation mechanisms while the ecosystem services approach makes the connection between the status of natural assets and human well being more explicit It can also provide an economic perspective focused on individual preferences and benefits which helps validate the acceptability of environmental planning goals Thus linking landscape planning and ecosystem services provides a two way benefit creating a usable science to meet the needs of local and regional decision making The book is structured around the Driving forces Pressures States Impacts Responses framework providing an introduction to relevant concepts methodologies and techniques It presents a new ecosystem services informed approach to landscape planning that constitutes both a framework and toolbox for students and practitioners to address the environmental and landscape challenges of 21st century Europe

Contesting Global Environmental Knowledge, Norms and Governance M. J. Peterson, 2019-01-08 Through

theoretical discussions and case studies this volume explores how processes of contestation about knowledge norms and governance processes shape efforts to promote sustainability through international environmental governance The epistemic communities literature of the 1990s highlighted the importance of expert consensus on scientific knowledge for problem definition and solution specification in international environmental agreements This book addresses a gap in this literature insufficient attention to the multiple forms of contestation that also inform international environmental governance These forms include within discipline contestation that helps forge expert consensus inter disciplinary contestation regarding the types of expert knowledge needed for effective response to environmental problems normative and practical arguments about the proper roles of experts and laypersons and contestation over how to combine globally developed norms and scientific knowledge with locally prevalent norms and traditional knowledge in ways ensuring effective implementation of environmental policies This collection advances understanding of the conditions under which contestation facilitates or hinders the development of effective global environmental governance The contributors examine how attempts to incorporate more than one stream of expert knowledge and to include lay knowledge alongside it have played out in efforts to create and maintain multilateral agreements relating to environmental concerns It will interest scholars and graduate students of political science global governance international environmental politics and global policy making Policy analysts should also find it useful

Building Entrepreneurial Ecosystems in Sub-Saharan Africa Constant D. Beugré, 2016-12-13 Africa suffers from two main diseases poor management and a lack of vibrant entrepreneurial activity The continent has the raw materials the people and the potential to be developed and yet there remain barriers that prevent it from bettering itself To promote entrepreneurship as an engine of economic development and growth the author has developed a Quintuple Helix Model which advocates mutual cooperation and information sharing among the five helices and provides valuable guidelines to policymakers on how to build entrepreneurship ecosystems in sub Saharan Africa It goes on to examine the roles that government donors and public and private sectors play and how Africans themselves might take the development of entrepreneurial societies into their own hands The book includes seven chapters that emphasize the key role that each of the five components could play in the development of entrepreneurial ecosystems Entrepreneurship scholars policy makers and national and local governments of sub Saharan Africa will value this insight as they strive to create a more favorable landscape for their citizenry

Advances in Organic Farming L.P. Awasthi, 2025-08-21 This book describes critically reviewed key aspects of organic farming and provides a unique and timely science-based resource for researchers, teachers, and extension workers, undergraduates, postgraduate students, primary producers, and others interested in organic farming. The first section of the book provides an overview of organic farming, a general introduction followed by the origins of organic farming, the principles of organic farming, challenges for organic farming, crop protection in organic farming, and environmental impacts of organic farming. The next section deals with the management of various crop diseases through botanical biopesticides and Integrated Pest Management practices, followed by overarching regulatory and management concerns. The book is written by a range of specialists with direct experience of organic farming over many years. Authors from over a dozen countries in several continents have contributed to this unique and indispensable resource that offers a diverse range of valuable information, data, and perspectives on organic farming at a time when the world community is increasingly aware of the problems of our current agricultural practices and the importance of creating sustainable agricultural systems for the long-term health of humankind and the biosphere as a whole. Invasion of Woody Legumes O.W. Van Auken, J.K. Bush, 2013-05-22 Includes our current knowledge of the invasion or encroachment and cause of population growth and spread of some dry land arid zone

woody legumes Community structure population growth and competition of these woody legumes will also be examined These species and ecosystems are both extensive and dynamic They occur worldwide but mainly in the arid zones of the tropics and sub tropics The cause of the growth and spread of these species and communities has long been claimed to be caused by distal factors rather than proximal ones However these species appear to be influenced and perhaps controlled by anthropogenic factors specifically grazing and fire or lack of fire Their overall worldwide distribution has probably changed little in the recent past but their populations have expanded into grasslands and their density has increased in many places Some associated communities have shown dramatic changes in response to recent large scale droughts and the loss of most of the dominant overstory species However changes in the woody legume communities and their species are generally unknown
