Basic Knowledge](#) Facundo Conforti, We begin part of our aviation career flying completely solo or with an instructor assigned to a specific task

As flight hours accumulate our cockpit begins to be shared with colleagues friends instructors etc But after a long path of experience the time comes to share a professional cockpit with another pilot as part of a working team This is where novice or inexperienced pilots who lack knowledge and training in a shared cockpit often face difficulties in performing routine tasks Flying in a shared cockpit not only presents a challenge for any pilot who has developed their career flying solo but also for airlines that foresee this possibility and invest resources in training pilots to bring them to the highest safety standards Considering this a pilot with knowledge and mastery of shared cockpit techniques and airline flight resources represents a competitive advantage when applying for a job with an airline as opposed to pilots who lack these tools Learning to fly in a shared cockpit as in airline operations involves getting to know your coworker forming a team where tasks can be shared roles distributed and being objective and self critical without losing the professionalism and cordiality between colleagues Flying in an airline environment is teamwork where there will be a leader and an advisor roles that will continuously shift challenging pilots to adapt Flying for an airline is more than just flying It is about sharing assisting correcting helping cooperating and pushing together toward the same goal achieving a successful and safe flight Let us explore all the tools necessary to make our next shared cockpits a safe and professional environment where airline flight operations are more than just that

Airbus A320 Simulator Training Facundo Conforti, Aircraft simulators are an integral part of every pilot's professional life Within these simulators pilots learn to manage abnormal operations not just considering mechanical failures but any situation that could compromise flight safety Airline pilots are required to demonstrate their performance in a simulator every six or twelve months depending on the airline In these simulator sessions pilots are evaluated not only on their maneuvers and flight management but also on teamwork leadership and decision making abilities in extremely critical situations Additionally simulator sessions are instructional where an instructor provides specific training to each crew aiming to enhance their knowledge in managing abnormal operations A simulator can become your best friend or your worst enemy depending on the approach you take In this work you will learn to give the simulator its rightful place and it will become your best ally as that is its ultimate purpose

Sully's Challenge: "Miracle on the Hudson" - Official Investigation & Full Report of the Federal Agency National Transportation Safety Board, 2017-02-10 How can a 10 pound bird bring down a 150 000 pounds aircraft How would you feel if you were the captain on that aircraft responsible for 155 souls What would you do to prevent the disaster How would you communicate with other crew members and the passengers How would you determine where to try to ditch the plane in an unprecedented situation How would training and experience influence your decision What lessons can we learn from Captain Sullenberger's calm actions which incredibly saved all lives onboard Successful Ditching of US Airways Flight 1549 on Hudson River by Captain Chesley Sullenberger and First Officer Jeff Skiles on January 15 2009 This edition provides all the details of this incredible event transcripts of pilot's communications and the final results of a thorough investigation They analyzed in great detail the aircraft the accident the damages the personnel on

board and on the ground their training and their communications their actions during the accident the survival aspects the birds the meteorology and more Finally they drew their conclusions and put together their recommendations based on the results of the examination to prevent similar events in the future

Systems Maintainability J. Knezevic, 1997-07-31

Maintainability is of crucial importance throughout industry and is established as one of the most important issues in the aerospace and defence arena No new system can be introduced without full maintainability analysis and demonstration a type of analysis which reduces life cycle costs by decreasing operational and maintenance costs and increasing systems operational effectiveness leading in turn to the creation of more competitive products This book establishes the full methodology for maintainability mathematics and modelling as well as the relationship between the maintainability and maintenance processes

101 FLIGHT LESSONS Cabin

Crew Facundo Conforti, The 101 Flight Lessons collection has been created to cover the main theoretical concepts of the most relevant aeronautical subjects at each stage of the career of a pilot air traffic controller and passenger cabin crew member 101 Flight Lessons includes a summary of the main aeronautical topics on subjects such as meteorology aerodynamics flight instruments maneuvers structures and aircraft engines regulations airports and a set of lessons that every pilot whether in training or already graduated should always keep in mind This work is dedicated not only to all aeronautical personnel in general but also to aviation enthusiasts who enjoy a pleasant read for recreational and educational purposes The Aeronautical Library has more than 100 aeronautical books entirely in Spanish making it the largest collection of aeronautical books in this language in the world Successful throughout the Americas Spain and much of Europe the Aeronautical Library has become the leading bibliographic collection on the market

Multi-Crew. Shared Cockpit

Facundo Conforti, From the beginning of their aviation career during their first hour of flight instruction a pilot is introduced to the concept of a shared cockpit although in this case with an instructor in charge of the lesson Without realizing it they are taking their first steps in crew resource management CRM a concept that will accompany them into the more professional stage of their career flying for an airline For a significant portion of a pilot's career this concept of a shared cockpit does not apply as the pilot often flies solo with friends or with non aviation related passengers After receiving their private pilot's license the new pilot starts flying to accumulate flight hours and during this period the concept of a shared cockpit is not a requirement although it should be In this manual we aim to provide a definitive solution to this gap in the aviation training system and introduce the concept of a shared cockpit to pilots at all levels from the initial student pilot about to embark on their first solo flight to the professional pilot entering the airline environment Learning to fly in a shared cockpit does not refer to the technical flying skills a pilot may have when operating the aircraft rather it refers to the human resources inside the cockpit and the management of these resources in the interest of flight safety One of the cornerstones of this concept

which we will learn is understanding that every procedure can be shared between two pilots This approach not only ensures procedural effectiveness but also maximizes available resources for the flight Once you have learned this concept and applied it in real life flights you will notice that flying in a shared cockpit not only makes the flight more enjoyable but also more efficient This will be the objective of our work to teach you all the principles of crew resource management so you can become a more efficient pilot than you were before reading this book
