central concern in database queries and offers an important contribution to the design of intelligent information systems. It provides a comprehensive study on fuzzy preference queries in the context of relational databases. Preference queries, a recent hot topic in database research, provide a basis for rank ordering the items retrieved, which is especially valuable for large sets of answers. This book aims to show that fuzzy set theory constitutes a highly expressive framework for modeling preference queries. It presents a study of the algorithmic aspects related to the evaluation of such queries in order to demonstrate that this framework offers a good trade off between expressivity and efficiency. Numerous examples and proofs are liberally and lucidly demonstrated throughout and greatly enhance the detailed theoretical aspects explored in the book. Researchers working in databases will greatly benefit from this comprehensive and up to date study of fuzzy preference queries and it will also become an invaluable reference point for postgraduate students interested in advanced database techniques. The only other books which deal with this topic are edited books or conference proceedings which include a few contributions about some specific aspects of the question. This book provides a comprehensive view of the issue starting with basic notions related to relational databases and fuzzy set theory up to the detailed study of complex fuzzy queries and the way they can be efficiently processed. It is the compendium of more than 20 years of research by the authors who benefit from a great international recognition in the domain of intelligent information systems on the subject.

Global Capitalism and Climate Change Hans A. Baer, 2021-10-01. Now in its second edition, *Global Capitalism and Climate Change: The Need for an Alternative World System* examines anthropogenic climate change in the context of global capitalism, a political economy that emphasizes profit making, is committed to ongoing economic growth, results in massive social inequality, fosters a treadmill of production and consumption, and is heavily reliant on fossil fuels. Looking ahead, Hans A. Baer explores the systemic changes necessary to create a more socially just, democratic, and environmentally sustainable world system capable of moving humanity toward a safer climate. This book is recommended for readers interested in anti-systemic efforts including eco-anarchism, eco-feminism, the de-growth perspective, Indigenous voices, and the climate justice movement.

The Automotive Industry and European Integration A. J. Jacobs, 2019-08-07. This book chronicles the divergent growth trends in car production in Belgium and Spain. It delves into how European integration, high wages, and the demise of GM and Ford led to plant closings in Belgium. Next, it investigates how lower wages and the expansion strategies of Western European automakers stimulated expansion in the Spanish auto industry. Finally, it offers three alternate scenarios regarding how further EU expansion and Brexit may potentially reshape the geographic footprint of European car production over the next ten years. In sum, this book utilizes history to help expand the knowledge of scholars and policymakers regarding how

European integration and Brexit may impact future auto industry investment for all EU nations **Global Supply Chain Quality Management** Barbara B.
