

A Closer Look at Area of Regular Polygons **NOT**

A **regular polygon** is a polygon in which all sides are congruent and all angles are congruent.

Equilateral triangle
Equilateral triangle

Square

Regular pentagon

Any regular polygon can be decomposed into congruent triangles. The area of the regular polygon can be found by finding the area of one of the triangular regions and multiplying by the number of sides of the polygon. This method can be written as follows in the formula:

$$\text{Area of a regular polygon} = \frac{1}{2}Pn$$

where P represents the perimeter and n represents the number

The **apothem** is a segment that connects the center of a regular polygon perpendicularly to a side of the **regular polygon**. The **apothem** is also the perpendicular distance from the center of the figure to a side. The **apothem** divides P into the **regular polygon**. In Figure 1 below, a is the length of the apothem.

The **radius** is a segment that connects from the center of the regular polygon to a vertex of the polygon. The **radius** is also the distance from the center of the polygon to a vertex of the polygon. The **radius** divides an interior angle of the regular polygon. In Figure 1 below, r is the length of the radius.

Triangles of special right triangles, $30^\circ-60^\circ-90^\circ$ and $45^\circ-45^\circ-90^\circ$ and the trigonometric ratios can be used to solve problems involving regular polygons.

beginning Geometry at the age of twelve or even younger It is based upon the author s class room experience with young boys during the last twelve years It is hoped that it may prove an aid to those teachers who do not want a text book except as a guide to the pupil to enable him to review the principles developed in the class by answering for himself a set of questions similar to those asked in the class room and by working out practical problems illustrative of the principles studied It cannot be used as a text book from which lessons are assigned in advance to the class Each principle should be developed by the teacher and the class working together the principle coming at the end not at the beginning of the study and then a lesson from the book covering essentially the same ground should be assigned The book has not been divided into lessons because sometimes a single paragraph will afford material for several lessons and again several pages can be mastered in one lesson Each teacher should be free to develop his subject in his own way Without artificial lines of division The main object of the first year s study is to make the pupils perfectly familiar with the use of their tools so that in the study of Theoretical Geometry the construction of the figures will present no difficulty In the pursuit of this object a great many useful working principles are learned which greatly simplify the more advanced study of the subject About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works Geometry Mcdougal Littell,2006-09-11 **Geometry Part 1** S.
