

Photosynthesis

The plant takes in sunlight through its leaves and other green parts.

Carbon dioxide from the air enters the plant.

The plant makes oxygen that is then released into the air.

A chemical inside the plant called **chlorophyll** traps the Sun's energy.

Inside the chlorophyll are **chloroplasts** that combine everything and makes the food/sugars for the plant.

The food is then sent throughout the plant. Plants and animals are living things. Both need the food and energy to live. Animals get their energy from the plants and animals they eat. Plants, however, do not have a mouth and cannot eat like animals. The food-making process for plants is called photosynthesis. It might be a big word, but **photosynthesis** is used by plants to make their own food as well as produce oxygen.
