

Maintenance

Drive Chain Inspection and Adjustment (90cc Models)

1. Check the amount of chain slack by moving the vehicle slightly forward to gain slack at the top side of the chain.
2. Collapse the suspension with an adjustable (buckle type) trailer tie down. Fasten the strap (A) around the axle and rear bumper tube.
3. Tighten the strap until a straight line (B) can be drawn from the rear axle to the gearcase output shaft intersecting the swing arm pivot. This establishes the tightest chain position.
4. Pull down on the chain tensioner (C) to move it out of the way, then measure chain slack. It should have 1/4"-1/2" (6-12 mm) deflection.
5. If the chain needs adjustment, use the procedure on page 154.
