The main component of the EMCP II+P system is the generator set control (GSC+P). The GSC+P is designed to operate when the GSC+P is powered by 24 DCV or 32 DCV. The GSC+P monitors and controls many of the functions of the generator set. The functions and features of the GSC+P are listed below.

- The GSC+P provides the generator AC output information. The information includes the metering of power. The GSC+P controls starting and stopping of the engine.
- The GSC+P shows engine conditions and generator output information on two displays.

- The displays show the fault codes. The displays also show the information for programming that is used by the GSC+P.
- The GSC+P monitors the system for faults. If a fault occurs, the GSC+P provides a fault alarm annunciation or the GSC+P performs a controlled fault shutdown. The GSC+P uses indicators and displays in order to describe the fault to the operator or the service technician.
- The GSC+P contains programmable features for certain applications. The programmable features are also used by the GSC+P in order to meet the requirements of the customers.

Note: Setting P023 to 0 ensures proper operation on MUI engines. Set P023 to 1 for Gas engines. Set P023 to 2 for EUI engines. Failure to set setpoint P023 can result in improper engine operation, incorrect display of engine parameters, and logging an erroneous CID 590 diagnostic code. For more information on the P023 setpoint and other GSC+P setpoints, refer to Systems Operation, "Engine-Generator Programming GP5-0".
