Sisneros, 2015-10-29

Fish Hearing and Bioacoustics is an anthology of review papers that were presented at a special symposium to honor Arthur Popper and Richard Fay on May 25th 2013 at the Mote Marine Laboratory in Sarasota FL. The research presentations at this conference spanned the range of disciplines covered by Fay and Popper during their long and productive careers. The book includes the following thematic areas for the papers in this special volume: morphology and anatomy of the inner ear and lateral line systems; physiology of inner ear lateral line and central auditory systems; acoustically mediated behavior including communication and sound localization; and environmental influences on fish hearing and bioacoustics including anthropogenic effects of noise on fishes. Each chapter reviews and summarizes the past studies of particular area that will lead the reader up to the current work presented at the symposium. In addition, each chapter includes a perspective of how Arthur Popper and Richard Fay have influenced their particular area of fish bio acoustic research. Each manuscript also includes a hypothesis for future studies. These hypotheses will provide a springboard for future work in each field.

Fish Physiology: Sensory Systems Neuroscience Toshiaki J. Hara, Barbara Zielinski, 2006-10-17

Fish sensory systems have been extensively studied not only because of a wide general interest in the behavioral and sensory physiology of this group but also because fishes are well suited as biological models for studies of sensory systems. *Fish Physiology: Sensory Systems Neuroscience* describes how fish are able to perceive their physical and biological surroundings and highlights some of the exciting developments in molecular biology of fish sensory systems. Volume 25 in the *Fish Physiology* series offers the only updated thorough examination of fish sensory systems at the molecular, cellular, and systems levels. Offers a comprehensive account of the present state of science in this rapidly expanding and developing field. New physiological techniques presented to enable examining responses at the cellular and system levels. Discusses fish sensory systems and how they have adapted to the physiological challenges presented by an aquatic environment.
