Abstract: A parenting style is a psychological construct representing standard strategies that parents use in their child rearing. Parenting styles are the representation of how parents respond to and make demands on their children. Research has often studied parenting style from the perspective of parents. This study attempts to approach the phenomena from the perspective of both parents and children. 160 fathers, 160 mothers and 160 children from urban and rural middle income families were questioned on responsiveness and demandingness of parents. A simple tool was developed, pilot tested and used. The results indicated that the differences between parents and children were marked among rural sample, but were found even among urban parents and children. In general, lesser number of parents felt they were authoritarian than the perceptions of their children. More parents felt they were democratic and permissive than what their children perceived.

Keywords: parenting style, authoritarian, democratic, permissive

1. Introduction & Review

A parenting style is a psychological construct representing standard strategies that parents use in their child rearing. Parenting styles are the representation of how parents respond to and make demands on their children

Parental responsiveness defined as "the extent to which parents intentionally foster individuality, self-regulation, and self-assertion by being attuned, supportive, and acquiescent to children's special needs and demands" (Baumrind, 1996, p. 410, cited in Grolnick, 2003, p. 6).

Parental demandingness is referred to as "the claims parents make on children to become integrated into the family whole by their maturity demands, supervision, disciplinary efforts and willingness to confront the child who disobeys" (Baumrind, 1996, p. 411, cited in Grolnick, 2003, p. 6).

Parenting styles affect children in many ways. Research indicates that parents tend to see themselves as democratic more often while children may not see their parents in such a light. These divergent perceptions could impact the manner in which child outcomes pan out.

Research results showed that adolescents from authoritative families applied most adaptive achievement strategies characterized by low levels of failure expectations, task irrelevant behaviour and passivity, and the use of self-enhancing attributions. Adolescents from neglectful families, in turn, applied maladaptive strategies characterized by high levels of task-irrelevant behaviour, passivity and a lack of self enhancing attributions (Kaisa aarnola, Haä kan stattin and Jari-erik nurmi, 2000)

Another interesting study found that only bullies and only delinquents had different parenting correlates; only bullies

had authoritarian parents and disagreed with their parents, whereas only delinquents had conflictual and low supportive parents (Baldry & Farrington, 2000)

Authoritative mothering was found to relate to higher self-esteem and life-satisfaction and to lower depression. Paternal parenting styles was also related to psychological adjustment, however, although the advantage of authoritative mothering over permissive mothering was evident for all outcomes assessed, for paternal styles the advantage was less defined and only evident for depression (Milevsky, Schlechter Neter & Keehn, 2007)

Maternal authoritative was related to a mastery orientation. Maternal authoritarianism and permissiveness were related to a performance orientation among high school children (Gonzalez, Doan Holbein & Quilter, 2002)

This study examined the relationship between children's perception of dissimilarity in parenting styles, and internalizing and externalizing problems in children. Children's perceived dissimilarity in parental emotional warmth was associated with internalizing and externalizing problems ($\beta = 0.092, p < 0.05$; $\beta = 0.091, p < 0.05$). Perceived dissimilarity between parents' overprotection is associated with externalizing problems ($\beta = 0.097, p < 0.05$). Perceived dissimilarity between parenting styles is associated with externalizing and internalizing problems, over and above the effects of the level of the parenting styles. The results highlight the negative consequences of perceived dissimilarity between parents (Berkien, Louwerse, Verhulst, and van der Ende (2012)

Strong relationship between children's school achievement and parenting attitude and style was reported. Findings from the review revealed that authoritative parenting styles were associated with higher levels of children's school achievement, though findings remain inconsistent across
