K. Jonsson, Mariona Portell, M. Teresa Anguera, José Luis Losada, Judith Schoonenboom, 2025-10-27 Having started as a small movement in the 1980s the study of mixed methods research burst onto the scene around the beginning of the second millennium. After decades of intense dispute between supporters of the qualitative perspective and their quantitative counterparts with both sides having grown deeply entrenched in their respective views a complementary approach promising the possibility of integration had finally been proposed. By that time however the vast majority of researchers had committed to one stance or the other very few of us argued that the two approaches could be complementary. Since then the number of publications, scientific meetings and other activities devoted to the mixed methods approach has increased exponentially throughout the world. At a substantive level we are pleased to see that a growing number of fields are generating mixed methods research and we are eager to assist in promoting this trend. But naturally the field has experienced some growing pains a certain degree of heterogeneity in terms of approaches, differences of opinion regarding certain conceptualizations for example mixed methods vs multimethods, numerous design taxonomies, multiple ways of integrating qualitative and quantitative elements and various positions on how best to overcome the enduring lack of symmetry between qualitative and quantitative aspects. The methodological and substantive spectrum is vast and broad possibly because the mixed methods approach has become obligatory for much research not only in psychology but in practically all branches of the social sciences.
