Oral Knowledge Questions (Oral Knowledge [OK]) using the Gizmo.

Let's start with a familiar situation: a falling object. Imagine a ball being dropped from the edge of a cliff. What happens as the ball falls? Newton's second law is the key to understanding this. Newton's second law says that the force on an object is equal to its mass times its acceleration. In this case, the force is gravity, which is pulling the ball down. The acceleration is also gravity, which is pulling the ball down. So, the ball is accelerating downwards.

- For each picture, the right direction represents a path that would make sense for a ball that was thrown from the cliff. Which one is correct? (A and B)

- Which would happen if the ball was thrown from the cliff at an angle?

Answer: The ball would go down at an angle, but it would curve towards the cliff.

Let's now look at a ball that was thrown from the cliff at an angle.
