Grlife Science Exemplars November:

Undergraduate Mathematics for the Life Sciences Glenn Ledder, Jenna P. Carpenter, Timothy D. Comar, 2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see

Integration in the Life Sciences Ulf Leser, Felix Naumann, Barbara Eckman, 2006-07-14 This book constitutes the refereed proceedings of the Third International Workshop on Data Integration in the Life Sciences DILS 2006 held in Hinxton UK in July 2006 Presents 19 revised full papers and 4 revised short papers together with 2 keynote talks addressing current issues in data integration from the life science point of view The papers are organized in topical sections on data integration text mining systems and workflow

Isotopes for Medicine and the Life Sciences Committee on Biomedical Isotopes, Institute of Medicine, 1995-02-10 Radioactive isotopes and enriched stable isotopes are used widely in medicine agriculture industry and science where their application allows us to perform many tasks more accurately more simply less expensively and more quickly than would otherwise be possible Indeed in many cases for example biological tracers there is no alternative In a stellar example of technology transfer that began before the term was popular the Department of Energy DOE and its predecessors has supported the development and application of isotopes and their transfer to the private sector The DOE is now at an important crossroads Isotope production has suffered as support for DOE s laboratories has declined In response to a DOE request this book is an intensive examination of isotope production and availability including the education and training of those who will be needed to sustain the flow of radioactive and stable materials from their sources to the laboratories and medical care facilities in which they are used Chapters include an examination of enriched stable isotopes reactor and accelerator produced radionuclides partnerships among industries national laboratories and universities and national isotope policy

Application of Visual Data in K-16 Science Classrooms Kevin D. Finson, Jon Pedersen, 2015-03-01 This book examines visual data use with students PK 16 as well as in pre service in service science

teacher preparation Each chapter includes discussion about the current state of the art with respect to science classroom application and utilization of the particular visual data targeted by the author s discussion and explanation about the targeted visual data as applied by the author in his her classroom use of visual data as a diagnostic tool its use as an assessment tool and discussion of implications for science teaching and or science teacher preparation Although the body of research and practice in this field is growing there remains a gap in the literature about clearly explicating the use of visual data in the science classroom A growing body of literature discusses what visual data are although this topic is still viewed as being at the beginning of its development in educators thinking and there are some scattered examples of studies exploring the use of visual data in science classrooms although those studies have not necessarily clearly identified their foci as visual data per se As interest and attention has become more focused on visual data a logical progression of questioning has been how visual data are actually applied in the science classroom whether it be early elementary college or somewhere in between Visual data applications of interest to the science education community include how it is identified how it can be used with students and how students can generate it themselves how it can be employed as a diagnostic tool in concept development and how it can be utilized as an assessment tool This book explores that as well as a variety of pragmatic ways to help science educators more effectively utilize visual data and representations in their instruction

Resources in Education ,1997 New Perspectives on the History of Life Sciences and Agriculture Denise Phillips, Sharon Kingsland,2015-02-12 This volume explores problems in the history of science at the intersection of life sciences and agriculture from the mid eighteenth to the mid twentieth century Taking a comparative national perspective the book examines agricultural practices in a broad sense including the practices and disciplines devoted to land management forestry soil science and the improvement and management of crops and livestock The life sciences considered include genetics microbiology ecology entomology forestry and deal with US European Russian Japanese Indonesian Chinese contexts The book shows that the investigation of the border zone of life sciences and agriculture raises many interesting questions about how science develops In particular it challenges one to re examine and take seriously the intimate connection between scientific development and the practical goals of managing and improving perhaps even recreating the living world to serve human ends Without close attention to this zone it is not possible to understand the emergence of new disciplines and transformation of old disciplines to evaluate the role and impact of such major figures of science as Humboldt and Mendel or to appreciate how much of the history of modern biology has been driven by national ambitions and imperialist expansion in competition with rival nations

New Approaches to Teaching Water Quality Using Examples Found in the Great Lakes Region Cynthia Stultz-Eichbauer,2003 **Proceedings of the High School Conference of November 1910-November 1931** ,1918 **Exploring the Moon and Mars** ,1992-09 **Biomedical Computing** Joseph A. biology and medicine today without computers What would laboratory work be like if electronic databases and statistical software did not exist Would disciplines like genomics even be feasible if we lacked the means to manage and manipulate huge volumes of digital data How would patients fare in a world absent CT scans programmable pacemakers and computerized medical records Today computers are a critical component of almost all research in biology and medicine Yet just fifty years ago the study of life was by far the least digitized field of science its living subject matter thought too complex and dynamic to be meaningfully analyzed by logic driven computers In this long overdue study historian Joseph November explores the early attempts in the 1950s and 1960s to computerize biomedical research in the United States Computers and biomedical research are now so intimately connected that it is difficult to imagine when such critical work was offline Biomedical Computing transports readers back to such a time and investigates how computers first appeared in the research lab and doctor s office November examines the conditions that made possible the computerization of biology including strong technological institutional and political support from the National Institutes of Health and shows not only how digital technology transformed the life sciences but also how the intersection of the two led to important developments in computer architecture and software design The history of this phenomenon has been only vaguely understood November s thoroughly researched and lively study makes clear for readers the motives behind computerizing the study of life and how that technology profoundly affects biomedical research today

Nuclear Science Abstracts ,1971 **Learning That Sticks**
 Bryan Goodwin,Tonia Gibson,Kristin Rouleau,2020-06-05 In far too many classrooms the emphasis is on instructional strategies that teachers employ rather than on what students should be doing or thinking about as part of their learning What s more students minds are something of a mysterious black box for most teachers so when learning breaks down they re not sure what went wrong or what to do differently to help students learn It doesn t have to be this way Learning That Sticks helps you look inside that black box Bryan Goodwin and his coauthors unpack the cognitive science underlying research supported learning strategies so you can sequence them into experiences that challenge inspire and engage your students As a result you ll learn to teach with more intentionality understanding not just what to do but also when and why to do it By way of an easy to use six phase model of learning this book Analyzes how the brain reacts to stores and retrieves new information Helps you zoom out to understand the process of learning from beginning to end Helps you zoom in to see what s going on in students minds during each phase Learning may be complicated but learning about learning doesn t have to be And to that end Learning That Sticks helps shine a light into all the black boxes in your classroom and make your practice the most powerful it can be This product is a copublication of ASCD and McREL
