Environmental Radiation Effects on Mammals Olga A. Smirnova, 2010-12-17

The monograph is devoted to the theoretical studies of radiation effects on mammals It summarizes the results obtained by the

author over the past 30 years most of them being of high priority In the course of these studies a single approach to the modeling of radiation effects on mammals has been elaborated Specifically in the framework of the developed deterministic mathematical models the effects of both acute and chronic irradiation in a wide range of doses and dose rates on vital body systems hematopoiesis small intestine and humoral immunity as well as on the development of autoimmune diseases are investigated The radiation effects on the mortality dynamics in homogeneous and nonhomogeneous in radiosensitivity mammalian populations are also studied by making use of the developed stochastic models The most appealing feature of these mortality models consists of the fact that they account for the intrinsic properties of the exposed organism Namely within these models the stochastic biometrical functions are calculated proceeding from statistical characteristics and dynamics of the respective critical body system hematopoiesis or small intestine The performed theoretical investigations contribute to the development of the system and quantitative approaches in radiation biology and ecology These studies elucidate the major regulatory mechanisms of the damage and recovery processes running in the vital body systems of exposed mammals and reveal the key parameters characterizing the processes

Pharmaceutical Biotechnology Daan J. A. Crommelin, Robert D. Isolation and Characterization of Uncle Fester, an Allorecognition Molecule in the Primitive Chordate, *Botryllus Schlosseri* Tanya Renee McKittrick, 2011 transmembrane helices and a short intracellular tail Sequences from over 70 individuals collected from populations along the West Coast of North America and two populations from the North East coast revealed that uncle fester is remarkably non polymorphic with only two single nucleotide polymorphisms and one amino acid deletion found to be segregating within these populations I first determined uncle fester expression by RT PCR and found that expression begins in the early stages of embryonic development and continues throughout the life cycle of the individual These studies also revealed that uncle fester is alternatively spliced in the embryo tadpole and adult stages of development Each adult examined thus far expresses three alternative splice variants however embryos and tadpole larvae express an additional set of splice variants The roles of these splice variants remain unknown I then performed in situ hybridization on tadpole larvae juveniles and adult colonies using an uncle fester specific riboprobe to determine where the uncle fester mRNA is localized The results indicate that uncle fester mRNA is found on the larval adhesive papillae the epithelia of the ampullae and on a subset of blood cells all tissues known to be involved in the allorecognition response I also created two monoclonal antibodies to the uncle fester protein and results from whole mount immunohistochemistry are concordant with the mRNA in situ hybridization data The methods and characterization of the uncle fester antibodies can be found in Chapter 4 Previous studies have shown that fester is also expressed along the epithelia of the ampullae To determine if both proteins are co expressed on the same populations of cells I performed double labeled FACS and IF using directly conjugated fester and uncle fester mAbs Results indicated that all cells that express uncle fester also express fester and in addition there is a population of fester uncle fester cells found migrating within the tunic To determine if uncle fester was functionally involved in the allorecognition response I used two distinct approaches First I delivered custom siRNA to individuals while surgically removing the ampullar tissue essentially forcing the animals to regenerate new ampullae under the effects of the siRNA and eliminating the uncle fester protein When incompatible colonies were paired while under the effects of siRNA the allorecognition response was never initiated and the two colonies eventually

grew over the top of each other. However, the application of *uncle fester* siRNA had no effect on compatible colonies, suggesting that the activation of a rejection reaction is independent of a fusion response. The second approach was to stimulate function using the *uncle fester* specific monoclonal antibodies. By conjugating the mAb to magnetic beads, I was able to localize the antibody to the epithelia of ampullae, which resulted in the formation of strong points of rejection on a single colony. In summary, I found that *uncle fester* is a non-polymorphic type I transmembrane protein that expresses a limited repertoire of alternative splice variants. It is co-localized with both the *fuhc* and *fester* on all tissues important to the allorecognition response. Functionally, *uncle fester* is required to activate a rejection response but plays no role in compatible interactions. These results have transformed our working hypothesis from allorecognition consisting of a single activating pathway to one consisting of two independent activating and inhibitory pathways that control histocompatibility outcomes.

USMLE Step 1 Recall Brent A. Reinheimer, 2005. This quick, easy-to-use review helps students get prepared for Step One of the USMLE. The question and answer RECALL employs helps students memorize the facts that are most often tested on the USMLE. The Second Edition organizes facts according to their specific basic science disciplines and provides accurate up-to-date information at just the right level of depth for study and review. Many students regard Buzzwords as the strongest USMLE Step 1 tool on the market. An especially popular Power Review section helps students brush up on the details and test how well they've retained knowledge over the study period.

Bailey & Scott's Diagnostic Microbiology Patricia M. Tille, 2021-02-04. Textbook and Academic Authors Association TAA Textbook Excellence Award Winner 2024. Selected for Doody's Core Titles 2024 in Laboratory Technology. Perfect your lab skills with the essential text for diagnostic microbiology. Bailey Scott's Diagnostic Microbiology, 15th Edition, is known as the 1st bench reference for practicing microbiologists and as the preeminent text for students in clinical laboratory science programs. With hundreds of full-color illustrations and step-by-step methods for procedures, this text provides a solid basic understanding of diagnostic microbiology and also covers more advanced techniques such as matrix-assisted laser desorption/ionization time-of-flight mass spectrometry. Written by noted CLS educator Dr. Patricia Tille, Diagnostic Microbiology has everything you need to get accurate lab test results in class and in clinical practice. More than 800 high-quality full-color illustrations help you visualize concepts. Expanded sections on parasitology, mycology, and virology allow you to use just one book, eliminating the need to purchase other microbiology textbooks for these topics. Hands-on procedures show exactly what takes place in the lab, including step-by-step methods, photos, and expected results. Case studies allow you to apply your knowledge to diagnostic scenarios and to develop critical thinking skills. Genera and Species boxes provide handy at-a-glance summaries at the beginning of each organism chapter. Learning objectives at the beginning of each chapter provide measurable outcomes to achieve by completing the chapter material.
