Every child has a right to make sense of math and to use math to make sense of their worlds. Despite their gifts, students with disabilities are often viewed from a deficit standpoint in mathematics classrooms. These students are

often conceptualized as needing to be fixed or remediated Rethinking Disability and Mathematics argues that mathematics should be a transformative space for these students a place where they can discover their power and potential and be appreciated for their many strengths Author Rachel Lambert introduces Universal Design for Learning for Math UDL Math a way to design math classrooms that empowers disabled and neurodiverse students to engage in mathematics in ways that lead to meaningful and joyful math learning The book showcases how UDL Math can open up mathematics classrooms so that they provide access to meaningful understanding and an identity as a math learner to a wider range of students Weaved throughout the book are the voices of neurodiverse learners telling their own stories of math learning Through stories of real teachers recognizing the barriers in their own math classrooms and redesigning to increase access the book Reframes students with disabilities from a deficit to an asset perspective paving the way for trusting their mathematical thinking Offers equitable math instruction for all learners including those with disabilities neurodiverse students and or multilingual learners Applies UDL to the math classroom providing practical tips and techniques to support students cognitive affective and strategic development Immerses readers in math classrooms where all students are engaged in meaningful mathematics from special education day classes to inclusive general education classrooms from grades K 8 Integrates research on mathematical learning including critical math content such as developing number sense and place value fluency with math facts and operations and understanding fractions and algebraic thinking Explores critical issues such as writing IEP goals in math This book is designed for all math educators both those trained as general education teachers and those trained as special education teachers The UDL Math approach is adapted to work for all learners because everyone varies in how they perceive the world and in how they approach mathematical problem solving When we rethink mathematics to include multiple ways of being a math learner we make math accessible and engaging for a wider group of learners Mathematics in the K-8 Classroom and Library Sueanne McKinney, KaaVonia Hinton, 2010-05-11 Two experts on education offer a rich and diverse selection of children s literature and teaching strategies for the K 8 mathematics classroom Taking advantage of quality motivating literature during mathematics instruction pays off especially when teachers and media specialists work together to convey crucial mathematical concepts and standards Mathematics in the K 8 Classroom and Library shows you how it s done After an introduction to the National Council of Teachers of Mathematics s NCTM Principles and Process Standards each remaining chapter is devoted to an NCTM content standard The book offers engaging research based strategies and booklists of specific titles that together can be used to increase student achievement The strategies suggested here provide a hands on student centered focus that allows students to make connections with prior learning personal experiences and good books Both the recommended children s books and the activities will appeal even to reluctant readers and students for whom mathematics might be a challenge Each chapter includes an extensive annotated list of texts dozens of hands on activities handouts and writing prompts
