Woodland Conservation and Management G. F. Peterken, 2013-11-11 Professor John Harper in his recent *Population Biology of Plants* 1977 made a comment and asked a question which effectively states the theme of this book Noting that one of the consequences of the development of the theory of vegetational climax has been to guide the observer's mind forwards i.e. that vegetation is interpreted as a stage on the way to something he commented that it might be more healthy and scientifically more sound to look more often backwards and search for the explanation of the present in the

past to explain systems in relation to their history rather than their goal He went on to contrast the disaster theory of plant succession which holds that communities are a response to the effects of past disasters with the climax theory that they are stages in the approach to a climax state and then asked do we account most completely for the characteristics of a population by a knowledge of its history or of its destiny Had this question been put to R S Adamson E J Salisbury A G Tansley or A S Watt who are amongst the giants of the first forty years of woodland ecology in Britain their answer would surely have been that understanding lies in a knowledge of destiny Whilst not unaware of the historical facts of British woodlands they were preoccupied with ideas of natural succession and climax and tended to interpret their observations in these terms

discusses the challenges faced in dealing with an uncertain future More than 1200 different references and numerous web site citations provide the reader with an invaluable source of knowledge on the subject area Trees, Forested Landscapes and Grazing Animals Ian D. Rotherham, 2013-03-05 In this comprehensive book the critical components of the European landscape forest parkland and other grazed landscapes with trees are addressed The book considers the history of grazed treed landscapes of large grazing herbivores in Europe and the implications of the past in shaping our environment today and in the future Debates on the types of anciently grazed landscapes in Europe and what they tell us about past and present ecology have been especially topical and controversial recently This treatment brings the current discussions and the latest research to a much wider audience The book breaks new ground in broadening the scope of wood pasture and woodland research to address sites and ecologies that have previously been overlooked but which hold potential keys to understanding landscape dynamics Eminent contributors including Oliver Rackham and Frans Vera present a text which addresses the importance of history in understanding the past landscape and the relevance of historical ecology and landscape studies in providing a future vision **Natural Woodland** George F. Peterken, 1996-03-28 A fascinating account of woodland natural history for all those concerned with woodland management and ecology *Individual-based Methods in Forest Ecology and Management* Arne Pommerening, Pavel Grabarnik, 2019-09-17 Model driven individual based forest ecology and individual based methods in forest management are of increasing importance in many parts of the world For the first time this book integrates three main fields of forest ecology and management i e tree plant interactions biometry of plant growth and human behaviour in forests Individual based forest ecology and management is an interdisciplinary research field with a focus on how the individual behaviour of plants contributes to the formation of spatial patterns that evolve through time Key to this research is a strict bottom up approach where the shaping and characteristics of plant communities are mostly the result of interactions between plants and between plants and humans This book unites important methods of individual based forest ecology and management from point process statistics individual based modelling plant growth science and behavioural statistics For ease of access better understanding and transparency the methods are accompanied by R code and worked examples **General Technical Report PSW.**, 1978 **A Living Countryside?** Tony Varley, 2016-03-23 By examining a range of experiences from both the north and south of Ireland this book asks what the ideal of sustainable development might mean to specific rural groups and how sustainable development goals have been pursued across the policy spectrum It assesses the extent of commitment to a living countryside in Ireland and compares various opportunities and obstacles to the actual achievement of sustainable rural development How different sectors of rural society will be challenged in terms of future survival provides an overarching theme throughout **Proceedings of the Fifth Symposium on Oak Woodlands**, 2002 **Woodland Survey Handbook** Keith Kirby, Jeanette Hall, 2019-05-02 How do you record the wildlife in a wood This book explains ways to record the flora and fauna found in woodland and outlines the sources you can

use to find out more about the history and management of an area Whether you have just a few hours or a few years there are examples that you can follow to find out more about this important habitat Woods include some of the richest terrestrial wildlife sites in Britain but some are under threat and many are neglected such that they are not as rich as they might be If we are to protect them or increase their diversity we need first to know what species they contain how they have come to be as they are to understand how they fit into the wider landscape Conservation surveys are the bedrock on which subsequent protection and management action is based There is not one method that will be right for all situations and needs so the methods discussed range from what one can find out online to what can be seen on a general walk round a wood to the insights that can come from more detailed survey and monitoring approaches Fast evolving techniques such as eDNA surveys and the use of LiDAR are touched on
