Toast Book 2 Rick Allen, 2025-03-01 After the Nuclear Holocaust Dick Patch and their close friends are fighting for their lives against unbelievable odds The only inhabitable places left are Taswegia and New Haka Two ex Navy Clearance Divers an ex Army Sapper and their partners fight to reach a place where they can make contact with others who are hopefully still alive and who can help them rid their land of the Alliance A danger fraught week of travel began with Sarge Patch April and Annie on horseback and Dick and Jack travelling by road and sea Along the way both groups encountered Alliance troops more than once only narrowly escaping with their lives eventually managing to reach the relative safety of Hells Beach where they set up camp thinking they were well out of reach of the Alliance at last However their reprieve from danger was brief awakening one morning to find that a Freemantle Class Patrol Boat had appeared at the entrance to the bay Realising they were about to be discovered they worked together to overpower the Alliance crew and take control of the patrol boat

may occur thanks to the firing of neurons making up the MNS. The possible interdependence between different cognitive systems has implications for healthy as well as pathological profiles and in fact work in recent years has also explored the role of embodiment and or the MNS in clinical populations such as stroke, Parkinson's Disease, Alzheimer's Disease and Autism among others. Research on embodiment and or the MNS has been approached with a number of different methodologies but the results obtained with these different methodologies have not been entirely consistent, generating doubts regarding the theories. The question has been raised as to what this line of inquiry can gain from the types of evidence contributed by functional neuroimaging methods carried out with healthy volunteers versus behavioral or lesion symptom mapping methods employed with neurologically compromised individuals. Of particular interest are the clinical applications of this line of research. If indeed a system exists which reflects a tight link between for example the human language and motor systems then the obvious challenge is to tap into this system to create useful therapies that can provide rehabilitation where damage has occurred. This Research Topic brought together work conducted with healthy and patient populations using several behavioral and imaging techniques as well as insightful commentaries and opinion pieces. We believe the combined work of the participating authors is an important contribution to this intriguing line of research and an excellent point of reference for future work.
