The Enduring Promise of America's Great City Schools Michael

Casserly, 2024-10-30 A sober yet encouraging look at how urban public schools have confronted challenges defied

expectations and continued to improve

The Education Invasion Joy Pullmann, 2017-03-14 Most Americans had no idea

what Common Core was in 2013 according to polls But it had been creeping into schools nationwide over the previous three

years and children were feeling its effects They cried over math homework so mystifying their parents could not help them

even in elementary school They read motley assortments of informational text instead of classic literature They dreaded the

high stakes tests in unfamiliar formats that were increasingly controlling their classrooms How did this latest and most

sweeping reform of American education come in mostly under the radar Joy Pullmann started tugging on a thread of reports

from worried parents and frustrated teachers and it led to a big tangle of history and politics intrigue and arrogance She

unwound it to discover how a cabal of private foundation honchos and unelected public officials cooked up a set of rules for

what American children must learn in core K 12 classes and how the Obama administration pressured states to adopt them

Thus a federalized education scheme took root despite legal prohibitions against federal involvement in curriculum Common

Core and its testing regime were touted as an absolute game changer in public education yet the evidence so far suggests

that kids are actually learning less under it Why then was such a costly and disruptive agenda imposed on the nation s

schools Who benefits And how can citizens regain local self governance in education so their children s minds will be fed a

more nourishing intellectual diet and be protected from the experiments of emboldened bureaucrats The Education Invasion

offers answers and remedies *Handbook of Research on Digital Tools for Writing Instruction in K-12 Settings* Anderson,

Rebecca S., Mims, Clif, 2014-04-30 More emphasis is being placed on writing instruction in K 12 schools than ever before With

the growing number of digital tools in the classroom it is important that K 12 teachers learn how to use these tools to

effectively teach writing in all content areas The Handbook of Research on Digital Tools for Writing Instruction in K 12

Settings will provide research about how students use digital tools to write both in and out of school settings as well as

discuss issues and concerns related to the use of these learning methods This publication is beneficial to educators

professionals and researchers working in the field of K 12 and teacher education Respect for Teachers Brian

Ford, 2012-12-27 For over 30 years we have been in the midst of a paradox Following a questionable logic that sees education

as a means to economic ends efforts to reform education have focused on keeping the US from slipping in international

economic competition Relying on testing as a standard in the end we may have decreased our human potential and become

less competitive Our system has gotten worse at its core in its philosophical tenets and in its ultimate effects by placing

unwonted pressure on our youth and in stifling their creativity While this goes back decades Respect for Teachers takes its

title from a phrase perhaps a codeword in President's 2011 State of the Union address and sits down to consider its implications Connecting attacks on teachers unions and schools and the misrepresentation of research to the promotion of new economic models in education it suggests that the Obama administration may be without quite realizing it setting the stage for rapid privatization of the public system As this endangers the egalitarian basis of democracy it also reminds us that schooling is big business many trillions of dollars world wide Joseph Schumpeter once said No bourgeoisie ever disliked war profits Respect operates under the premise that no bourgeoisie ever disliked the spoils of school reform either

How We Teach Science John L. Rudolph, 2019-06-01 A former Wisconsin high school science teacher makes the case that how and why we teach science matters especially now that its legitimacy is under attack Why teach science The answer to that question will determine how it is taught Yet despite the enduring belief in this country that science should be taught there has been no enduring consensus about how or why This is especially true when it comes to teaching scientific process Nearly all of the basic knowledge we have about the world is rock solid The science we teach in high schools in particular laws of motion the structure of the atom cell division DNA replication the universal speed limit of light is accepted as the way nature works Everyone also agrees that students and the public more generally should understand the methods used to gain this knowledge But what exactly is the scientific method Ever since the late 1800s scientists and science educators have grappled with that question Through the years they've advanced an assortment of strategies ranging from the laboratory method to the five step method to science as inquiry to no method at all How We Teach Science reveals that each strategy was influenced by the intellectual cultural and political circumstances of the time In some eras learning about experimentation and scientific inquiry was seen to contribute to an individual's intellectual and moral improvement while in others it was viewed as a way to minimize public interference in institutional science John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation and ultimately determine how science is perceived and received by the public

The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Board on Higher Education and Workforce, Committee on Integrating Higher Education in the Arts, Humanities, Sciences, Engineering, and Medicine, 2018-06-21 In the United States broad study in an array of different disciplines arts humanities science mathematics engineering as well as an in depth study within a special area of interest have been defining characteristics of a higher education But over time in depth study in a major discipline has come to dominate the curricula at many institutions This evolution of the curriculum has been driven in part by increasing specialization in the academic disciplines There is little doubt that disciplinary specialization has helped produce many of the achievement of the past century Researchers in all academic disciplines have been able to delve more deeply into their areas of expertise grappling with ever more specialized and fundamental problems Yet today many leaders scholars parents and students are asking whether higher education has

moved too far from its integrative tradition towards an approach heavily rooted in disciplinary silos. These silos represent what many see as an artificial separation of academic disciplines. This study reflects a growing concern that the approach to higher education that favors disciplinary specialization is poorly calibrated to the challenges and opportunities of our time. *The Integration of the Humanities and Arts with Sciences, Engineering and Medicine in Higher Education* examines the evidence behind the assertion that educational programs that mutually integrate learning experiences in the humanities and arts with science, technology, engineering, mathematics and medicine (STEMM) lead to improved educational and career outcomes for undergraduate and graduate students. It explores evidence regarding the value of integrating more STEMM curricula and labs into the academic programs of students majoring in the humanities and arts and evidence regarding the value of integrating curricula and experiences in the arts and humanities into college and university STEMM education programs. *The Connection Between Mathematical and Reading Abilities and Disabilities* Shelley Shaul, Joanna Christodoulou, Maria T. Sikkema-de Jong, 2022-05-03 *Research in Education*, 1971-12
