

### Charge Interactions

Read from Lesson 1 of the Static Electricity chapter at The Physics Classroom:

<http://www.physicsclassroom.com/Class/estatics/u8D1c.html>

MOP Connection: Static Electricity: sublevel 2

1. **Review:** Fill in the following blanks with the words **electrons** or **protons**.

\_\_\_\_\_ are negatively charged and \_\_\_\_\_ are positively charged. As an object begins to gain or lose electrons from its atoms, it becomes positively or negatively charged. A negatively charged object has more \_\_\_\_\_ than \_\_\_\_\_. A positively charged object has more \_\_\_\_\_ than \_\_\_\_\_.

2. Charged objects interact with one another. One can observe the interactions and infer information about the type of charge present on an object. Complete the following statements to illustrate your understanding of the three types of charge interactions:

- Oppositely-charged objects \_\_\_\_\_.
- Like-charged objects \_\_\_\_\_.
- A charged object and a neutral object will \_\_\_\_\_.

3. Your physics teacher has prepared the room for the class's entry by suspending several inflated balloons from the ceiling. Upon entering the physics room, you observe two balloons being drawn towards each other as shown at the right. The attraction of these balloons for one another provides evidence that \_\_\_\_\_.

- both balloons are charged with the same type of charge
- both balloons are charged with the opposite type of charge
- both balloons are charged - either with the same type or opposite type of charge
- only one of the balloons is charged; the other is neutral
- at least one of the balloons is charged; the other is either charged or neutral

4. As you look around the room, you observe two other balloons being pushed away from each other as shown at the right. The repulsion of these balloons from one another provides evidence that \_\_\_\_\_.

- both balloons are charged with the same type of charge
- both balloons are charged with the opposite type of charge
- both balloons are charged - either with the same type or opposite type of charge
- only one of the balloons is charged; the other is neutral
- at least one of the balloons is charged; the other is either charged or neutral

5. In one part of the room, there are two balloons - one hanging straight down and the other being attracted to it. This is evidence that \_\_\_\_\_.

- balloon A is charged and balloon B is neutral
- balloon B is charged and balloon A is neutral
- balloon A is neutral and balloon B is negative
- balloon A is neutral and balloon B is positive
- ... nonsense! This would never happen if the balloons are identical and simply suspended by strings. They will attract each other and both be deflected from a vertical orientation.
